ming mongs from kettlethorpe mate but i dont remember you. ps... I
remember you white shark!! from the 80's. lol

3. New poll for wakefield_cb_radio

Yahoo group: wakefield_cb_radio_UK
Date: 2005-02-25 16:09:14 UTC
From: wakefield_cb_radio@yahoogroups.com
Topic: 3 Message: 3

Enter your vote today! A new poll has been created for the
wakefield_cb_radio group:

What would you like to see more of on
this site?

o photo's
o files
o links
o members
o you dont give a shit

To vote, please visit the following web page:
http://groups.yahoo.com/group/wakefield_cb_radio/surveys?id=1027768

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

4. New poll for wakefield_cb_radio

Yahoo group: wakefield_cb_radio_UK
Date: 2005-03-04 11:01:38 UTC
From: wakefield_cb_radio@yahoogroups.com
Topic: 3 Message: 4

Enter your vote today! A new poll has been created for the
wakefield_cb_radio group:

would you say chat rooms on the
internet is the cb of today ????

o yes
o no
o never realy thought of it like that
o dont realy give a toss

To vote, please visit the following web page:
http://groups.yahoo.com/group/wakefield_cb_radio/surveys?id=1041964

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups

Hi there fellow CBers,although im not in or near Wakefield (im on
other side of the hill in Manchester),I do miss the old CB.
There are still the odd few people on the rig in the Manchester area
but its nothing like it was back in the 1980's and 1990's.
I think this internet chat thing has killed it.

Hello gents. Thought I'd check this group out being an old timer from the early days. I fiddled around with some tube stuff in the late 60's and then bought a Cobra 21 mobile back in early 1973 which I still have. I went around to a couple of other boards but they got these young snobby know it all kids on them and they tried to make me look like a has-been dinosaur. What I'm trying to find out is, I heard somewhere that there's a new export radio out called a Cobra 200 GTL DX and I'm want to find out if this is for real or is someone pulling my leg. Right now I'm using a Cobra 148 GTL I modded out to the max but might be looking for something new. Man those kids agged me out. I'm on the air over 30 years,owned a CB shop at one time for several years and repaired and modified more radios then they can probably count to. Thanks for letting me vent.

Hello, yes I know the feeling. Initially lost interest when cb was made legal, I have since had a couple of rigs, but when I ever heard anyone it was just kids swearing like no-ones business, so I switched to scanning & SWL.Hope you find what you`re looking for.

Computers,email,IM/chat,and cell phones. No more being harassed by little kids with 40 channel babysitters. There's plenty of life still out there,but it's out of band. Go to some of the CB forums and look for people in your area that still use it. Don't go to cbtricks.com forum. There's some real arrogant twits in there that try to humiliate everyone that comes in there.

17. wi-fi interruption

Yahoo group: wakefield_cb_radio_UK
Date: 2005-05-07 03:10:05 UTC
From: Lyle
Topic: 17 Message: 17

I live full-time in a travel trailer in a rv park. I have an Antron-99 antenna up in the air 20 ft. This evening, the park manager came and told me to turn the base radio off, till after 9:00. He said that the guy that's about 50 ft. from me lost his wi-fi connection. Supposedly because I had the CB radio on. I hadn't even transmitted on the radio, but I complied with the manager's demands. My trailer is in direct line of the wi-fi antenna path to the guy's trailer, if that has any bearing on it. Does anybody believe that the radio actually caused the problem? Also wonder how the park manager just"automatically" assumed that I had the radio on, unless he had maybe heard the radio on. I think that the guy had a problem with his computer, or that the wi-fi had a problem. What does everyone think?

Don't know that much about wi-fi other then its way up there in the gigga hertz range. Just having your radio on would not be the problem. Your getting blamed because you have a CB antenna and most people don't understand how radio freqs. work. Before I moved, I had a neighbor that told me I was screwing up his cable TV even though at the time I was out in the driveway washing my truck. Can you talk to this guy that's having the problem and do some tests to see if it stops his problem when you turn your CB off. See if he still has the problem with it off or on. I can only think that you just might be blocking his reception with your trailer and not your radio. It also might be something in his home causing the problem. You'll just have to work with this guy to prove to him that it's not you.

Greetings from the Rose Capitol of Texas!
Well, the guy was an overnighter, and when I got up this morning, he was gone. Last evening when I was out walking the dog, he waived from inside his trailer, so must not have been a big issue for him. I tend to think that the park manager just "assumed" because I generally have the radio on when I'm at home, that it was the radio, and not my trailer blocking the wi-fi signal. By the way, my handle is Pistonpopper, and am usually on channel 28. I have a 2980WX base radio with a JB150 modulator. Hopefully this problem won't come up often.
Thanks for the help. I have been in the CB radio business for several years, but am new to having one in a travel trrailer (of which I live full-time)

Well I'm glad to see that it's a non-issue right now. If it should arise again just have them take it outside to the other side of your trailer and see what happens. I'm an old school CB'er from 1973 and have used the handle Nightowl ever since. I started with some old five channel tube sets and then bought a little Cobra 21 for the car. After that I got a power supply and a Big Stick for the roof so I could use it in the house as well. I had a knack for electronics and an interest in radio so I got into it hot and heavy. I self taught myself how to fix them and modify them so I started fixing and modifying for friends and for $$$. I met a guy on the air that owned a electronics parts store and we started selling and repairing and modifying CB's in his store. After a while I had my own shop up untill the craze died down and radios got cheap enough that people would buy new one's instead of paying to repair them. The big money then was driving trucks, so I went for it up untill a few
years ago when the ol' body just couldn't do it any more. I'm just using a Cobra 148 ssb that I modified to the max several years ago for my Van. I also have an old SBE ssb base also modded to the max but don't get on it very much anymore.

That's what I'll do. I started back about the same time with a cobra base that was one of the first ssb base radio's they came out with. I originally lived in Iowa, and Arkansas before moving to Tyler. I have a modded cobra 29 classic and a preditor 10k for my mobile. I used to go by Nightnurse and Nightstocker, but eversince my step-son and I blew the piston in the riding mower, I was given the handle Piston popper. I am generally on channel 28, which most of the locals run here in Tyler. Do you know if I could get the 2980 modded to put out better? More watts that is, without running any modulator or amp? By the way, what part of Texas are ya in? I might be inclined to drive over and let ya mod the base radio, or for just a good cup of coffee.

My daughter will be going to UT Tyler in the fall. I'm about 20 miles out of Houston, a fair distence from you. I'll be going up there with her after she graduates to set things up and maybe I'll pay you a visit. There's a ton of sites on the net that show you how to do just about any mod you can think of. I have several projects sitting here that I can't do right now because I need parts, and where I'm living now, there's no place to get them. It's a real hassle driving to Houston just to get parts. My wife is handicapped and takes up a lot of my time taking care of her. We just got her one of those electric wheelchairs and it makes things some what easier. I also have a Cobra 29 that all I did was open the audio. I have several radios here that I saved over the years. One of them that I like is a CB made by Standard, the marine radio company. It's called a Horizon 29 which was a 23 channel PLL. Then I got the 40 channel rotary switch for it from Standard. Not too many people know
that they made a CB. I think it was the only one they made. It's only AM but I played with it and got about 120 channels out of it. It's rare so I hang on to it. I haven't dug into a radio in a number of years but I saved all my schematics, mod sheets and notes. If you come accross a site called cbtricks.com, it's got a lot of info on it, some of it supplied by me. Just don't join the forum. It's got some real arrogant know it all guys on there that will try to humiliate and belittle you into leaving the forum. I had it out with them a while back and I got bumped from the forum. I guess the webmaster of that site would rather have those types on there then guys like you and me.

24. More on wi-fi interruption

Yahoo group: wakefield_cb_radio_UK
Date: 2005-05-15 03:05:29 UTC
From: Lyle
Topic: 24 Message: 24

Talked to the park manager this afternoon, and he said that they were sending the wi-fi unit off to a lab tosee what happened to it[the base unit here in the park]. He also incinuated that since they'd had some problems with tv interference and my radio[supposedly]I might have to get rid of my radio equipment. Told him that I hadn't even transmitted on the radio that day. He incinuated that I was pushing a lot of power, and I guess if 14 watts output barefoot, and approx. 60 watts with the JB 150 is a lot, guess I am guilty as charged. Anyways, right now I am very depressed over the whole ordeal. His suggestion was to not turn on the radio or be on it until 9:30 in the evenings. Like I said, I am depressed about it all.

I wish I had an answer for you. As far back as I can remember CBer's have been blamed for anything and everything. Everyone I've ever known that's lived in close quarters with other people have gone through this at one time or another. A lot of people have heard at one time or an other that CB's cause interference with TV's and such, so if their having some kind of problem, it must be the CBer. Maybe you could find a good Low Pass TVI filter and put it inline and show the guy that your trying to cooperate and that the filter will stop any possibility of you interfering with any other electronic devices. If you get one, get one rated for more watts then your putting out, and rated for a very wide range of frequencies. Also make sure everything is grounded better then good. A long piece of copper pipe hammerd into the ground with everything including the antenna grounded to it. Good luck.

Am in the process of getting these two things done. Think instead of grounding to the trailer, and then to the ground pipe/ground rod, I will attach the antenna ground to a ground from the equipment directly to a ground rod/ pipe. Which brings me to the question of how deep and go with a ground rod, or copper pipe? Any concrete suggestions for a TVI filter? When ya'll get ready to come up to Tyler, let me know, maybe you can come by or we can at least meet for coffee or something. I run on ch.28 up here, if ya happen to get up here before I get back with ya'll.

Topic: 24 Message: 27

That is exactly what I meant about the grounding. Ground everything individually to a copper pipe in the ground including the trailer. Don't depend on the rod in the ground for the electric meter or telephone line if you have one, it's not good enough. Assuming the trailer is metal, see if you can ground the skin of it as well to the pipe. The skin is also acting as a ground plane for your antenna so I'm not sure if that also could be one of your problems. Instead of throwing your signal up and out, it could also be just throwing it out everywhere off the trailer. Can't do much about that. Depending on who you ask, everyone will have a different configuration for a grounding system. In your situation you cannot get very elaborate, so a piece of copper pipe hammerd into the ground will have to do. I read somewhere years ago that the pipe should be driven into the ground at least eight feet if your using just one. I tried that here, but eight feet is a lot of work. I got about six or
so feet in and quit. I think if you can get at least three or four feet in, you should be ok. It makes it easier if you wet the ground good as your pounding it in. Maybe wait for a rainy day, ha,ha. Sandpaper the area clean where you attach your ground wires to the pipe and use car heater hose clamps to clamp them to the pipe. As far as the filter goes, go to google search and put in low pass TVI filters and see whats available for your needs. Then you have to find some place around you that carries them or have it shipped to you. In the mean time I'll do a little searching and see what I come up with. I used to deal with "Copper Electronics" years ago, but don't know if they still carry that kind of stuff anymore.

Break from a long time CBer. I have been on the squack box since i
was
old enough to key a mike. My mother (the LadyWildcat) used to be a
manager at a Radio Shack and my father (The Marlin) used to repair
radios for truckers in Portland OR. The question I pose is this; Does
any one remember some of these songs? "Hello Shirley this is Squirly"
and "The CB Handle Hall of Fame"? I used to have a tape that had
these
two songs as well as other CB related songs such as one about a
family
who use there sons CB radio to try and find out how he is doing over
in
Vietnam with humorus results. If anyone can help me I would be very
gratefull. So catch you on the flip side. This is Major Gamer going

not surre if the 200 is out yet but the straight AM rig is the 150gtl
the guys over at world wide radio fourm have been going thru a few of
them and they have put up some real nich info and photos.

Gentlemen, I have seen the Cobra 150 GTL DX model, and was told that the 200 should be out towards the end of this month. Both are DX models, and are consideraably cheaper than some of the exports like RCI. I may be wrong, but I think that the 200 will be the same comparably to the RCI 2950 in that it will have around a 100watt output. Which to me will mean that it has a cooling fan. If ever I get enough money saved up, I intend to purchase one for my mobile, and also am running a Texas Star Black Widow kicker with my modded Cobra 29 classic now, with a Preditor 10K antenna.. My base setup is an RCI 2980WX and a JB 150 modulator with an Antron 99.

Hey there guys, check the website www.cbcity.com They have the two new DX model Cobra radios, along with prices. They also have the 150 in their store, and can't wait to hear reports on it, and the 200 when it comes in (possibly the end of the month.) I really like my RCI 2980WX, and would like to someday get one of the new DX Cobra radios for the mobile. Have a great day. Are there any of ya's that travel in an RV full-time? Would really like to chat with ya!

Just thought I would drop a line and say 'breaker,breaker'. Also I wanted to drop a line about a group I am in. Its in northeast Ohio. We use CB radios and also recently FRS radios. Most of the members are old CBers and are still in them somewhat today. We assisst local law enforcement through eyes and ears. If anyone is interested in more infomation about this group, please e-mail and I will be glad to pass on the info.
Well until next time, I'll be 10-7 and 10-10 on the side.

Read this it's too funny...ha ha

ATTENTION LIVECBRADIO.COM USERS. If you have been listening to the live feed you notice someone has set up a transmitter to partially block cb radio communications. They set up a cb radio on some type of flasher so it clicks on and off. The signal seems to effect the whole town and has been reported at 7db five miles from here. The person responsible for this is RANDY MARTINEZ of Hallam/Lincoln Nebraska.(he has also claimed responsibility). He was also demonstrating his jamming device to another cber claiming the flasher he had wired in would "run forever". His CB Handle is "The Cosmic Rubarb". His Ametuer Ham Radio Call Sign is "N0QYI". The truth about Randy Martinez is that he is a 60 year old man that lives in a broken down short school bus on the edge of the city. He lives off of government assistance(welfare). "Cosmic Rubarb" spends most of his time on the CB Radio because he thinks the local ametuer operator club he belongs to is run by "a bunch of idiots", Since"Cosmic"is on Mental Dissability, his doctor has him on new medication for ADD. His doctor prescribed him some sort of Methamphetamine. This was obviouslly a bad idea because it has degraded his already poor mental condition to the point of strong paranoia and delusions. He simply thinks "everyone on the CB is out to get me". Randy Martinez is also on a rampage because he was outed on the cb radio for selling off his other prescription narcotics that he does not use. A few cbers have been in the little short school bus he lives in. He has MANY 2 liter bottles of Urine (pee) stacked up to the ceiling next to his radio equipment.One CBer reported Cosmic is saving his Urine for "Something Big". Some speculate he is saving his urine to build Pipe Bombs. (Urine contains Potassium Nitrate which is an ingredient in making pipe bombs). "Randy Rubarb" even has his own gun powder to make his own ammuninition for black powder weapons. He claims "it's legal to have blackpowder firearms" despite his 2 felony convictions for gun/drug violations. This guy is a tragedy waiting to happen. This is the closest thing to a "Uni Bomber" you will find in today's society. Cosmic's political and social personal convictions demonstrate him just as dangerous as the real "Uni Bomber". Just imagine a Uni-Bomber on Meth living in an old school bus.CBers in Lincoln Nebraska say "He is crazy, he is going to kill somebody some day, but it won't be with his bare hands." We at livecbradio.com hope this does not happen. But if it does, you heard it here first. LIVE!!!!! (feel free to share this story with others)

In the area of Grounding for radio a ham with an extra ticket told me, for a proper ground first you bury a 1957 buick, making sure you weld the copper wire(use 500 mcm, (pepperoni sized), onto the chassis. NOW we are talking ground.

But in reality a copper main is good, an 8foot rod is good.

The idea of pounding it in in wet weather is perfect. I did it that way for electrical services. If ground is dry set dig a hole a few feet deep and keep filling it with water, then pound the rod in.

If you have lots of dry days, keep that area wet.

I have heard of hams who soaked the ground beneath certain types of antenni just before a big DX contest. They soak the lawn as they have grounding radial BURIED beneath the area under their towers/odd antenni. Well , odd to most kinda interesting with their own esoteric beauty to me.

I was thinking Wakefield NY (part of NYC), where is this Wakefield, bos-tone?

tnx
chris

Hey -

I'm trying to track down anyone who knew a woman who went by the handle of "Manzanita Bush" or just "Bush" in the Yuba County or Sacramento area of California in the 70's, 80's, and 90's.

Thanks!

61. Double Bazooka Dipole Antenna

Yahoo group: wakefield_cb_radio_UK
Date: 2006-02-14 02:23:28 UTC
From: Lyle
Topic: 61 Message: 61

Has anyone ever heard of this antenna? I found it on www.radiowavz.com
The guy sells then on ebay, and am just wondering about it. I live in a
travel trailer, and am wanting to get an antenna that will outperform
my Antron-99, and have very little "bleed over".

Any help will be appreciated.

Pistonpopper

62. New poll for wakefield_cb_radio

Yahoo group: wakefield_cb_radio_UK
Date: 2006-02-28 14:38:56 UTC
From: wakefield_cb_radio@yahoogroups.com
Topic: 3 Message: 62

Enter your vote today! A new poll has been created for the
wakefield_cb_radio group:

Do you think the end has come for CB radio in the UK?

o It will never take off,the net chatroom has killed it.
o No,its got a good future.
o It may take off if the licence is scrapped

To vote, please visit the following web page:
http://groups.yahoo.com/group/wakefield_cb_radio/surveys?id=1510890

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

RUBBER DUCK CONVOY SONG.
C.W. McCall Lyrics
Convoy Lyrics

(C.W. McCall, B. Fries, C. Davis)

[On the CB]
Ah, breaker one-nine, this here's the Rubber Duck. You gotta copy on me, Pig Pen, c'mon? Ah, yeah, 10-4, Pig Pen, fer shure, fer shure. By golly, it's clean clear to Flag Town, c'mon. Yeah, that's a big 10-4 there, Pig Pen, yeah, we definitely got the front door, good buddy. Mercy sakes alive, looks like we got us a convoy...

Was the dark of the moon on the sixth of June
In a Kenworth pullin' logs
Cab-over Pete with a reefer on
And a Jimmy haulin' hogs
We is headin' for bear on I-one-oh
'Bout a mile outta Shaky Town
I says, "Pig Pen, this here's the Rubber Duck.
"And I'm about to put the hammer down."

[Chorus]
'Cause we got a little convoy
Rockin' through the night.
Yeah, we got a little convoy,
Ain't she a beautiful sight?
Come on and join our convoy
Ain't nothin' gonna get in our way.
We gonna roll this truckin' convoy
'Cross the U-S-A.
Convoy!

[On the CB]
Ah, breaker, Pig Pen, this here's the Duck. And, you wanna back off them hogs? Yeah, 10-4, 'bout five mile or so. Ten, roger. Them hogs is gettin' in-tense up here.

By the time we got into Tulsa Town,
We had eighty-five trucks in all.
But they's a roadblock up on the cloverleaf,
And them bears was wall-to-wall.
Yeah, them smokies is thick as bugs on a bumper;
They even had a bear in the air!
I says, "Callin' all trucks, this here's the Duck.
"We about to go a-huntin' bear."

[Chorus]
'Cause we got a great big convoy
Rockin' through the night.
Yeah, we got a great big convoy,
Ain't she a beautiful sight?
Come on and join our convoy
Ain't nothin' gonna get in our way.
We gonna roll this truckin' convoy
'Cross the U-S-A.
Convoy!

[On the CB]
Ah, you wanna give me a 10-9 on that, Pig Pen? Negatory, Pig Pen;
you're still too close. Yeah, them hogs is startin' to close up my
sinuses. Mercy sakes, you better back off another ten.

Well, we rolled up Interstate 44
Like a rocket sled on rails.
We tore up all of our swindle sheets,
And left 'em settin' on the scales.
By the time we hit that Chi-town,
Them bears was a-gettin' smart:
They'd brought up some reinforcements
From the Illinoise National Guard.
There's armored cars, and tanks, and jeeps,
And rigs of ev'ry size.
Yeah, them chicken coops was full'a bears
And choppers filled the skies.
Well, we shot the line and we went for broke
With a thousand screamin' trucks
An' eleven long-haired Friends a' Jesus
In a chartreuse micra-bus.

[On the CB]
Ah, Rubber Duck to Sodbuster, come over. Yeah, 10-4, Sodbuster?
Lissen, you wanna put that micra-bus right behind that suicide
jockey? Yeah, he's haulin' dynamite, and he needs all the help he can
get.

Well, we laid a strip for the Jersey shore
And prepared to cross the line
I could see the bridge was lined with bears
But I didn't have a dog-goned dime.
I says, "Pig Pen, this here's the Rubber Duck.
"We just ain't a-gonna pay no toll."
So we crashed the gate doing ninety-eight
I says "Let them truckers roll, 10-4."

[Chorus]
'Cause we got a mighty convoy
Rockin' through the night.
Yeah, we got a mighty convoy,

Ain't she a beautiful sight?
Come on and join our convoy
Ain't nothin' gonna get in our way.
We gonna roll this truckin' convoy
'Cross the U-S-A.

Convoy! Ah, 10-4, Pig Pen, what's your twenty?
Convoy! OMAHA? Well, they oughta know what to do with them hogs out there fer shure. Well, mercy
Convoy! sakes, good buddy, we gonna back on outta here, so keep the bugs off your glass and the bears off your...
Convoy! tail. We'll catch you on the flip-flop. This here's the Rubber Duck on the side.
Convoy! We gone. 'Bye,'bye.

71. Hello to all

From: webcamsltd
Topic: 72 Message: 72

Hi!

I've created a PBwiki for this Yahoo! Group.

A wiki is an easy-to-use Web page that lets you collaborate with other people--no special knowledge required. It's unbelievably easy to use. You just start typing!

This is special because it allows us all to create new pages, make links to pages we've already made, and let others edit the wiki, too. We can all add to this wiki.

Log in here: http://wakefieldcbradio.pbwiki.com/ (the password is '1234')

Sent by the PBwiki team

This campaign is about Human beings, Democracy, UNHCR, Refugees, The Iraqis, Islam, Kurds, Human rights, Respect, Money, Donations, Angelina Jolie, Pavarotti, Giorgio Armani, Donors, Peace, History, Campaigns and about you if you care about these words.

Hi there,

I am SAM, an Iraqi refugee living in Lebanon at the moment; I have spent the last 10 years of my life as a refugee registered with the UNHCR in Beirut. The last 4 years, I have spent as an activist for peace and human rights (especially refugees and asylum seekers) on the Internet; I'm also books author and ebooks publisher. I have launched many campaigns to improve our situation as refugees in Lebanon and hopefully bring more understanding to our problems worldwide. I helped make many changes and improvements at the UNHCR office in Beirut; I used the Internet as the field for my activities (you can read more about that in my free ebook 'MY CAMPAIGNS'). All my ebooks are free and could be download from my sites.

This is my newest campaign, it's about the illegal and humiliating actions of the UNHCR, who using photos of refugees as banners and human-buttons to collect money. This is an abuse of the dignity and humanity of the refugees and must stop immediately and a clear public apology present by The United Nations High Commissioner for Refugees. My friends, I am talking about the pictures you can see here:
http://unhcrlebanon.freewebpages.org/human-buttons.htm

Also you can read my new campaign 'Urgent, we need smile' here:
http://lebanon.aahubs.com/email_me.htm

For more info about UNHCR and life of refugees you can read my free ebooks. I invite you as fellow humans and members of the world community to support my campaign by reading my article on my site and see the human-buttons. The campaign is to support and improve the UNHCR http://www.unhcr.org especially after the last scandals in the UN and UNHCR, just for example: http://www.mizzima.com/archives/news-in-2005/news-in-april/12-April05-22.htm

"We make demonstration and fast because the UNHCR office in Cairo did nothing for our problem..." http://news.bbc.co.uk/2/hi/africa/4440730.stm

Together we will build better world.

You could reach me fast via this form: http://lebanon.s4u.org/email_me.htm
and if you like to know more about me, you can google for my name 'osam altaee'.

Thanks
THE TRUTH WARRIOR

Just joined the group, and thought I'd say hello. I've been on the air since 1974. I've seen A LOT of operators come and go over the years. But, I've managed to stick with it.
I'd like run more SSB, but, none of my local friends seem to be interested. I don't think they like using a clarifier. I monitor 21 AM until the crap gets too deep. Then I'm off to L38, 27.755AM, or 27.665 AM or SSB.
I run a Mgnum S-45 or a RCI 2970 on the base. With either a SuperStar 3900, or a Uniden Grant XL in the mobiles. Depending on which car I'm.
Hope to catch some of you on the waves.

Just joined the group. I go by BIG AL on the radio, I started on the radio in the late 60'S. We had call letters at the time. My letters is KWS-7533 and KLL-1150. When you wanted to talk to someone you would call them by there call letters. I sure miss them days. The best radio i ever had was SONAR. I now collect them. A friend of my has a cb shop that he started in the 60's, He has so much stuff that he has forgotten what he has. I asked him about sonar radio and he said he thinks he has some brand new ones still in the box. And yes he had 3 brand new FS 3023 in the box and a new sonar BR-21 linear. Yes i got all 4 of them for 225.00. If anyone wants his card let me know, He has just about anything you would want. Thanks and GOD BLESS
BIG AL
KWS-7533

Converted ham/cb radios for sale, Forest,Oh
I have 3 RCI (Ranger) ham/cb radios for sale.
2 of the Rangers are 2970's.The 3rd is a 2990 base station.
All 3 are peaked, and converted. The 2990 has a separate 100 amp power supply. Silver eagle d-104, and sadelta mic included. The 2970's have the channel changing stock mics. All 3 for $1,000.00. FIRM. May consider separating them. But don't know how I'd price them. Make offer, we'll see? Have an
amp meter to go with them &/or check output. But no antenna on the house, or on a vehicle. All 3 work quite well, booklets included, and conversion charts. Any questions or if you need pics, I can take them, and e-mail them to you. These would almost have to be picked up as it'd cost a fortune to mail, the weight would be close to, or over 100#s (you'd have to pay shipping from 45843)
Thanks Sue
loslocos@...

125. RE: [wakefield_cb_radio] Converted ham/cb radios for sale, Forest,Ohio (Zaep Key: c4da34e7.45c5ed31.08d30db5)

Dear loslocosfarmnomore,

Thanks for your email, but at this point I have NOT actually received your message because I have implemented a challenge-response based anti-spam solution. Before I can receive your message you must respond in ONE of the ways outlined below.

You will not have to do this again.

REPLY TO THIS MESSAGE

Simply reply to this email message ensuring the subject of your reply contains the subject of this message. When your reply arrives I will receive your ORIGINAL message and all FUTURE messages.

Or as an alternate method follow these instructions:

CLICK ON THE URL

Visit the following URL and follow the simple instructions. When you do this I will receive the message you sent and ALL future messages.

http://challenge.4ghc.com:8081/?key=c4da34e7.45c5ed31.08d30db5

If the above URL does not appear all on one line, copy and paste it into your browser's address bar.

PLEASE NOTE: If you receive an error message when attempting to visit the above URL, it is very likely that your network is not allowing you to visit my confirmation page. If this is the case, contact your network administrator for help, or contact me by telephone.

If you do not respond within 7 days, your message will be DELETED and I will not be able to receive messages from you in the future.

I apologize for this small one-time inconvenience, but I have been forced to implement this challenge-response based anti-spam solution to eliminate 100% of the spam I receive, and it really works!

To learn more about the software I am using to stop spam, please visit http://www.Zaep.com/. Zaep has stopped 100% of all the spam

messages I was receiving every day.

Thank you,

Henry T Sahler III

Converted ham/cb radios for sale, Forest, Oh

I have 3 RCI (Ranger) ham/cb radios for sale.
I have been watching on ebay, prices are fair.
2 of the Rangers are 2970's.The 3rd is a 2990 base station.
All 3 are peaked, tuned, and converted, with variable output. A.M., F.M., Upper & lower S.S.B. These are sweet radios to use, frequency range is 2600-3200 mghtz. The 2990 has a separate 100 amp power supply. Silver eagle D-104, AND Sadelta echo mic included. The 2970's have the channel changing stock mics. All 3 for $1,000.00. FIRM. Will consider separating them. $300.00 for 2970's (each). $550.00. for the 2990, mics, power supply, and an amp meter. No antenna on the house, or on our vehicle to double check outputs, but all 3 worked QUITE well when stored. Can have outputs checked in semi, if requested. But guaranteed NOT DOA. Booklet included, has freq, read outs, along with reg. cb channels. Any questions ask. If you need pics, I can take them, and e-mail them to you. These would almost have to be picked up as it'd cost a fortune to mail, (buyer would have to pay shipping) the weight would be close to, or over 100#s for all 3. Serious inquiries I can weigh on bathroom scales, zip is 45843
Thanks;
Sue

From: bruce mallon
Topic: 187 Message: 194

WHAT? who told you that ?

NO FCC person would make such a statement ....

1) the FCC offices are not allowed to determin the
legalty of radios other that by the list of certified
radios

2) This is the site you would go to to see if
certification is valid ...

https://gullfoss2.fcc.gov/prod/oet/cf/eas/reports/GenericSearch.cfm?calledFromFrame=N

If someone DID give you that advice they gave you at
best invalid information ..... That is determined by a
department that does the certification ..... and
they post it on the link above.

As of January 1978 it was ILLEAGAL to sell even used
any 23 ch cb sets and a recent rule does not even
allow they to be used.

Why anyone would want them is their problem .....

I dont make laws only because I repair radios have to
follow them ..... like it or not .....

198. 60 DB over S9 miss information.

Yahoo group: wakefield_cb_radio_UK
Date: 2007-05-11 02:23:56 UTC
From: bruce mallon
Topic: 198 Message: 198

In more that 40 years of being involved in radio It has always been even on land Mobile bands a lack of understanding of the rules is the norm.

When you pick up a mike to any PERSONAL RADIO SERVICE (CB/ MURS / FRS) radio you are licensed to use it by the FCC PROVIDED you follow the rules for that service.

FAILURE to do this revokes that licenses and you can be fined up to 10K for what seem to be minor violations.

Using any non-certified radios or linears is what the FCC gets most operators on .... and SELLING them is what most shops get nail for.

FEW get nail for simply working skip ..... go look at enforcements and you will see this.

If you do not feel rules apply to you keep this in mind IF you want more check out other kinds of radios like HAM.

This is the simple fact of CB radio which goes back to PART 19 long before PART 95 .... In 50 years nothing has really changed.

I have been licensed for CB since 1963 and use it almost every day along with the land Mobile radios that I Maintain and my HAM hobby which i also hold a license for.

Now have fun on the radio that's what your buying them for .... the bands have been good this last week.

Bruce

199. Antron99 vs. IMAX 2000

Yahoo group: wakefield_cb_radio_UK
Date: 2007-05-11 06:17:46 UTC
From: Lyle
Topic: 199 Message: 199

Was wondering which is the better antenna, A-99 or the IMAX 2000? Both technical, and non-technichal? Does the ear kit really make the antenna better?

Also, am going to put up a 50 foot push-up pole, how do I make it sturdy enough to use w/o guy wires?

Any help will be greatly appreciated!

Radio South-North...Radio is Friendship and Friendship is Peace! ! !

Did you ever hear about something like this? No?

Okay, then let me have a little of your time and attention to tell
you more what's it all bout.

We are a CB-Radio Group<CitizenBand11m on 26/27MhzBand> to make
Contacts and Friendships across the whole entire Wolrd!!!! I
know all this might sound really big to you right now...and agree
with you in this point, it is indeed!

Our great DX-Group was found by 21RSN-001 Op.: Janne from Sweden back
in the Year of 2003. Our Lifetime Membership is freely and
voluntarily to purchase. And here comes the major fun part of it:

It's a " FREE MEMEBERSHIP-with NO COST" for everybody and as long as
you will be a part of our huge and giant Radio Family ! ! !

What we really try to do in this matter is a way much more than just
talking to people around the Globe and exchanging stupid QSL-Cards
for any Dx-Diplomas or something like thais. It's like a fun raising
being together, to share the same hobby we got<CB-Radio> and keep
this Spirit alife to something we are all believe in and what makes
us feel good. Like I already said, Radio is Friendship and
Friendship is Peace! Feel free to join us and help our Group to grow
bigger and bigger...

Thanks for taking a few moments of your precious time to learn more
about RSN-Dx Group!!!

73's,51's & god bless you and your Famlies...

2RSN-911 Op.: Kirk, Director of RSN-Dx Group-California / USA

The one mobile antenna that I've never had is a 102 inch steel whip, so really can't say that I know how they actually perform, but I have had a Preditor 10K for over three years, and the swr is set flat. I think I have pretty good luck with it. It hears and performs good for me. When ya say that some people can't fit them on a car. Well, I have the Preditor on the roof of my car, and, yes, I have knocked it off even with the 4 magnet mount! Just my observations here, but y'all don't have to send me back any change!

The rule for any antenna is a full size (102 inch) whip will work best NO MATTER WHO MAKES IT . Then as you make them shorter will loading coils the signal will go DOWN . Through the glass antennas are JUNK and sever "S" units weaker than the 7 foot fiberglass whips I like to use (HAM-STICKS) that I have found for HAM use are as good as you will need on any band.

DO NOT BELIEVE THOSE WHO SAY THEY HAVE IMPROVED ON ANY 102 IN WHIP or have a 5/8 wave on a 5 foot stick a 5/8 wave to work has to be about 21 foot long or claim GAIN worst are JOGUNN and STARGUNN since when confronted to show how they obtained those numbers they simply brush you off.

Antennas follow set laws of physics you get gain just like a flashlight by placing the signal where you need it to go. There is no such thing as AUDIO GAIN or any gain on a antenna shorter than that 102 inch whip and anyone the violates this rule by stating gain outside them is full of poop.

Yes its called PART 15 under thar rule THEY need to fix it. Remember if you touch it they will say somehow you runned it. Many of them are on 49.830 or 49.840 mhz and can be coppyed by even old 210 bearcat scanners from the 70's. Beads will help but like the cordless phone problem I have here ..... LEGALY or not they are going to blame YOU.

FCC RULES .....

Sec. 15.19 Labelling requirements.

(3) All other devices shall bear the following statement in a
conspicuous location on the device:

This device complies with part 15 of the FCC Rules. Operation is
subject to the following two conditions: (1) This device may not cause
harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This is the law they like it or not.

I am wondering too. I come across radios telephones computer speakers. You name it. My mom the other day was on a land line phone I was in the drive way talking on my mobile when I walked in her and her sister heard every word I said. I pull in to my g/f house and was talking to truck drivers on my mobile my cell phone rings and my girl friend said you are comming through my stereo and computer speakers as plain as day. I was shocked, amused yea I had a smile on my face but I was shocked. There is nothing in the world I can think of that I can do about it that I know of. I know this is no help for the topic but I have simular problems. I was wondering is your cb a base or a moble, with a base antenna or what is your system?

The neighbor has said that it's no big deal that I come across the baby monitor, with both the mobile, and base radios, with a little helper for both. I have an IMAX 2000 in the air about 35 feet. The antenna is above the tree line, and above power lines. This is the first time in quite awhile that I have had any reports, so am thinkiing that maybe if I get a choke or ferrite bead for the monitor, that, that will fix the problem. Will hope so anyways!

In y'alls case, I am wondering if there might be either an swr or a frequency problem with y'alls mobile. Would not be suprised if the first is the case though.

Hi. Just wondering if you have an SWR meter connected, external to your CB not a built in one? I have read that the diodes in an SWR meter can rectify some of your signal and cause localized interference. If so try without the meter and see if there is a difference. You could also try a low pass filter. I hope this helps,Anthony.

TRUE the diodes CAN rectify signals and if its trash out of your radio a lowpass filter also can help make shure that the filter is down BEFORE 40 mhz some don't cut off untill you get to 54 mhz so that they will work on 6 meters. AGAIN this aside PART 15 devices have no protection under FCC rules. I have a on going fight with the guy next door who went so far as to have a lawyer send me a letter warning me that he will take legal action to stop my HAM RADIO BROADCASTS and force me to dispose of all antennas and radios ..... LOTS OF LUCK .....

As a CB user you have RIGHTS too unless the local goverment has passed a FCC preemtion enforcement law which follows this rule ....

"This new law amends the Communications Act of 1934 to allow a state or local government to enact legislation enforcing FCC regulations which prohibit: 1) the use of certain CB radio equipment or; 2) the unauthorized operation of CB radio equipment on a frequency between 24 MHz and 35 MHz. Localities can now pass their own ordinances and use their own resources to enforce violations of FCC regulations "

EVEN with these laws as long as you are within all rights to use your radios as long as you stay within the rules and the FCC will not go after you even if you are not because on ONE PART 15 problem .

I got a built in swr on my mobile. I got a external one that I did hook up just to double check but the one in the radio is reading correct. The radio is a Galaxy DX-949 the antenna is a 102" inch steel whip on a stake bed mount. The radio was peak and tuned when bought at gi joes electronics bought it on-line. The radio dead keys at 6w and swings to 12w. My base radio in my play room may be lol'd at it is a old pearce-simpson lynx 32ch radio with a solarcon antenna on 35' of mast pipe. My mobile seems to go through every thing my base dont or I havnt had any reports of interferance due to it. Im just glad of tolerable neibors but my base I only realy use it at night when the noise level comming in aint so bad. Its almost time for skip to start comming in this time of year. I cant wait, lol!

Somewhat true PERSONALY I have not had much luck with " FAN " antennas but if you cut them just right each should work at its cut frequency.

No it really doesn't work that way. First of all either antenna would work by it self. Now if you wanted to use them together they should be tuned for the center of the band. then you should use a prepared cable. Because if you use a tee adapter you have like 3 db loss form each connection. So with a cb being only 4 watts at the final, you would effectively being only putting out less then a watt to the antennas. Besides the antennas should be about a 1/4 wave apart. Now that's 8 and half feet on a normal car that is hard to do. The best you could do is one of the antennas cut to the center of the band mounted right in the center of the roof, a close second would be on a trunk lip mount on the rear trunk lid. You so you see mobile ops are at best a series of trade offs.

YOU CAN RUN MORE THAT ONE ANTENNA ! However you must feed it from one point like a DX-CC dipole does. Because these are so close in frequency I doubt it would work right most " FAN " feed antennas are on very diffrent frequencys. I would agree that most likely you would see a loss so in short if you need that much frequency range use the longest antenna you can and a tuner it would work better. to cover 27.205 to 29.600 I used a wip cut for 29.600 mhz and a small MFJ tuner and got both .....with acceptable matches since my main frequency is 29.600 FM and CH-20 was secondary.

hello lyle from the cold country ct...getting back into cb myself after a 10 yr absence...i'm amazed how quiet the band is...have a few regulars up here on 39 cw...right now still starting out with an excalibur ssb, siltonix 1011c, an couple 139 xlr's and a few mobiles. off an antron 99... ..back in the 80's and 90's had all we could do to talk local with the skip during the day
guess cell phones did away with the cb craze...i like the older rigs myself .... 73's floyd

On the mic I'd go to amazon on the antenna part what kind of vehicle are you puting it on? Like dose the size of the antenna matter? I got a 102" whip on my pickup truck but I don't need to go into like parking garages and the like. I had before the 102 I had a Wilson 500 It done real good. I got a Astatic power mic I realy like. I bought it used by a guy I was talking to on the cb never met him before or since we met at a gas station I hooked the mic up it worked great and I gave him $30.00. LoL,

What is the best radio and the worst radio you have had experience with? It seems there are a lot of junk being sold as cb's now. Still a lot of good ones but you pay for them at a high price. Or is it all in the name on the front you are buying? What are youre views? Give a review of a radio you love, hate, or just a review of the cb you are running on good or bad.

THE WORST CB's ANY 23 ch or tube type ..... Even if they were legal you would have to REBUILD them change every cap and resistor .....

The BEST is a GRANT LT Sitting in my shack is one that is my CB station. STABLE clean and hard to beat .....

As for EXPORT sets a MAG-257 (HTX-10 clone) is one fine small radio .....

Last night 6/23/08 0145 am. I was talking aprox 20 miles to locals from my vehicle at work. I was telling them I was at Campbells Creek. A guy broke in asking me where at on Campbells Creek (he sounded local) so I told him 5 mile. He stated what state I was like West Virginia. He was in Missouri The ppl I was talking to heard him and we could talk back in forth for about 10 minuits. The guy in Missouri came in better than the ones 20 miles away.

279. CB Magazine.

Yahoo group: wakefield_cb_radio_UK
Date: 2008-07-26 22:14:58 UTC
From: Citizensband.RadioUK
Topic: 279 Message: 279

After running a survey, it has been decided to start a new
Citizens' Band related magazine.
The plan is to include PRM, FRS, etc, and to include international
information. By making it international, it can cover just about any
topic that the previous CB magazine seemed to avoid. It is hoped
that this, and including related mainstream topics, will give it wider
appeal.

We do not want it to be a hammy type magazine, we want it to be
for the general public who are more interested in chat. However,
technical subjects will be included, as they relate to CB and other
public communications.

We have been working on a set of terms / policies, layouts, articles
and a shed load of graphics. It's rather more involved than was expected.

It is hoped to start the magazine within the next couple of months. The
plan is for a free version by download and a printed version at a price to
cover costs.
We would welcome any help; particularly information about clubs, news,
reviews and other articles of interest on the topic. We would also welcome
any links to related Web sites, to be included in the magazine.

Any contributors can be credited as the author of their work. This includes
related businesses, who may see it as a more effective method of gaining
publicity than a plain advertisement - and without the cost.

Regards,
Peter.

Topic: 245 Message: 284

Your galaxy may cause more TVI because when some people tune radio's for max swing they adjust the 54Mhz trap(built in TVI filter) built into the radio. Using this method on most peak reading meters this gives you not only increased TVI but a false level of forward swing. When I tune a radio I adjust it for max Peak-to-Peak voltage using an O-scope and watch what happens on an average reading meter (all done on a dummy load). I leave the TVI trap alone because I dont have the spectrum analyzer to correctly adjust it. This will typically give the same level of forward swing without the added TVI.

I had a Lynx 23 with a turner +2 base mic about 30 years ago, it was a nice sounding radio.

Jim

"The neighbor has said that it's no big deal that I come across the baby monitor"

Well a TVI filter might help however the monitor is a part 15 device.
I would not worry but go get a filter just to show the FCC you took steps to fix the problem .
I knock out the guys 49 mhz phone next door when Im on 6 meters He called the FCC....
They told him to get a new phone .... That I was licensed and with in my license and that his phone was not protected by FCC rules ....

Part 15 says .....

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Enough said ......

From: Jim
Topic: 245 Message: 286

I was just pointing out that an incorrectly aligned CB radio (not aligned to FCC spec and would not technically be covered under part 15) will cause more TVI than something that was aligned correctly. This is why the unlicenced CBers without the correct tools and equpment can get themselves into trouble. Most truck stop CB repair shops wont drop the money for the proper equipment, and most likely would not no how to use it anyway.

OK, I have decided to scrap the idea of converting a Motorola mobile mic for CB operations. My second question is this. Does anyone have an opinion on how well a Sure 526 T desk mic will work for SSB as well as am? Also, is it better or equal to a D-104? Anyone want to get rid of one?

Most if not all Motorola Mics are not electric something or other and most mordoren radios have the mic powered from the radio IE a voltage comes out of the radio to the mic to power it. Recomend going to the Sure mic company they have a hand mic that has many different cable sets with wired plugs for many different radios.

Subject: Re: [wakefield_cb_radio] A couple of questions

Most of those mikes are very flat sounding ICOM uses the same mike for many of there radios it's not bad sounding but again most CB/HAM mikes sound a bunch better .....

Use a CB/HAM mike I use the mikes made for my radios and never regreted it ...

AVOID MFJ MIKES LA GARBARGE !

Bruce, sounds like I might be better off to "can that idea" of the motorola mic, but amstill interested in a Sure 526T desk mic. And yep, I was about half asleep when I was typing that first email.

I work on ICOMS but use to work on motorolas and dont see why you would want to fool with one of those mikes ... YES some can be used on a cb but from what i remember of them they sound very flat .....no real highs or lows ....

28.285 AM ? what class of license do you have ? or did you meen 27.285 ..... LOL

Good morning y'all. I am wondering, if anyone has converted an older Motorola mobile mic to adapt to a CB radio? And does anyone have one? My second question is, if anyone has a Shure 526T desk mic that they'd want to get rid of, and how well it works on not only Am, but ssb also? Have a Blessed Christmas and a New Year!

Just wondering if anyone has heard of Sirtel antennas? I have 7 brand new ones that has never been open. I did talk to cooper electronics and they said they were very good antenns. He also said that they were better than wilsons. If anyone knows anything about them please let me know. Also can anyone tell me who made the tube type Kicker K 500

Sirtel have been about for some years. They were
big in the 1980s, with both antennas and their own
branded CB radios. I have a Sirtel CB sat right
here.

As for quality, I am not sure how they compare to
other brands now. I have some of their catalogs
which were downloaded from their Web site.

From: Peter
Topic: 311 Message: 311

As my filter says it just deleted another message, maybe I should make it clear what the problem is.

1. The internet is full of scumbags sending spam, viruses, unwanted porn and scam E-mails. Unexpected, large E-mails from someone you don't know are usually a sign of a virus. Multiple copies of the same E-mail are also usually a sign of spam, most spam received here comes that way - multiple copies.
2. If a recipient has a dial-up connection, that 17Mb of E-mails can be well over an hour downloading... at their time and cost.
3. E-mail boxes have a limited size, often just 10Mb. Once full, incoming mail is rejected. I may have been just minutes from having my mailbox full and messages bounced.
4. Bounced Yahoo Group messages result in Yahoo suspending membership (they stop sending you the posts) until you go to their site and reset your membership.

I have previously lost E-mail and had my Yahoo Groups suspended because mail was bouncing, and it is a pain. I have also been bombarded with virus E-mails from spammers, which were all stoppped by that filter.

I would hope that you could understand why sending unsolicited large E-mails without prior warning is a problem. I would also expect you to understand that the recipient has an on-the-spot choice: take ages downloading something they never asked for, which may be a virus, or send a delete message to the server.

If the recipient asks you what it is then, to download your response, they must also download the huge file. If it was a virus, too late... it's downloaded.

If, by protecting all the systems at this location, I have offended you in any way, then sorry... but I have to deal with all unexpected E-mails in the same way. That is, allow the filter to eat it and warn the sender.
Most, if not all, organizations would also delete that message if it arrived in their mailbox.

Peter.

well, even though 1.6 isn't bad, I'd personally try getting it lower, and wouldn't be too hard to do, just clip a tiny bit each time, if the stinger is clear in the baseload.

317. One more Question

Yahoo group: wakefield_cb_radio_UK
Date: 2009-03-16 11:45:36 UTC
From: Big Al
Topic: 317 Message: 317

Fixing the coax got my swr down to 1.2 and 1.3. Here is another question. I am running a Motorola 4020 in my car. I also have a Motorola swr/watt meter. When i tested the swr i also checked the watts that it was putting out. When i would whistle in the mic it would show a backward swing and the meter on the radio shows backward swing. So i hooked up my astro meter to it and it showed foreword swing on it. The Motorola meter showed it was dead keying 4 1/2 watts and swinging backwards. But the astro meter shows 4 watts and swinging to about 7 watts. Even when the astro shows foreword swing the meter on the radio still shows backward swing. Does anyone know what this means and if i need to correct anything. Thanks

two more questions,
3.How many rigs do y'all have?
4. Do y'all have to be a ham operator to use these?

I have a wilson 500 on my truck and when the swr gets up to about 1.6 normaly all I do is cleanthe whip portion of the antenna with some steel wool lift the antenna up off my roof and clean the spot real good where it sits and the swr goes back down to about where I adjusted it about 1.1 1.3 or in that area. You got a great antenna there I'v had mine for about 3 years. Maybe cleaning the whip portion will bring your swr down.

1.6:1 is 5% loss .....

Also if this is on CB you mean all 40 ch not bands since no antenna is going to cover " ALL BANDS " the VSWR will rise quickly outside of a few hunderd KHZ .....

I think you mean "Banned", I don't think that on that specific date they said to the tens of thousands of CB'ers that had 23 channel radios they had to stop using them or face fines and penalties.

Do you have something from a government website that says they are illegal?

My first CB was a Lynx 23 back in 1977, I had a Turner +2 desk microphone and a Hy-Gain 5/8 wave antenna. Channel 24 was wired into the PA slot. It was a nice sounding radio. I have fond memories of that one.

Yes I do

Sec. 95.603 Certification required.

    (c) Each CB transmitter (a transmitter that operates or is intended to operate at a station authorized in the CB) must be certificated. No CB transmitter certificated pursuant to an application filed prior to September 10, 1976, shall be manufactured or marketed.

This is covered in the 1978 release and since to use a CB it has to be certified if it was made under this rule and cannot be manufactured now it cannot be certified for use TODAY.

THEY WERE NOT GRANDFATHERED IN AT THAT TIME OR SINCE.

I have a public release dated 1978 banning the sale at any level and a follow up letter from the FCC in 2001 stating they are now ILLEGAL TO USE.

They ARE illegal .....

So are any other radio not certified for part 95 ......

Sec. 95.409 (CB Rule 9) What equipment may I use at my CB station?

    (a) You must use an FCC certificated CB transmitter at your CB station. You can identify an FCC certificated transmitter by the certification label placed on it by the manufacturer. You may examine a list of certificated equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC certificated voids your authority to operate the station.

This DOES NOT APPLY to a HAM running one on a band OUTSIDE CB which he is licensed to use .... such as 12 or 10 meters. Having a HAM license DOES NOT allow you to run one on CB no more that a amp or extra channels.

Dose the FCC enforce this UNLIKELY however if you get caught it is the same as running a amp or " EXPORT SET ".

The same problem will apply to all wide-band FM radios for part 90 (police) after 2013 .ALL of them will be illegal.. which is why we are changing over at the jail I Martainn them for a living.

I don't know about 23 channel CB radios being band or not. I would have to say it is not true. If it was true ebay and a lot of CB shops would be in a lot of hot water. Myself i would like to see ebay in hot water. Ebay don't think anyone can touch them in anyway. Yes i am one who has sold items on ebay and i have had ebay pull it off because they said it was illegal to sell them on ebay. Yes i am talking about a linear. I had a Kicker K 500 on it and they pulled it off. The very next day a Kicker K 500 was on ebay and guess what they did not pull it off and it was sold. There is one on ebay right now. So i would say the FCC would go after that other than a 23 channel CB. There probable is more 23 channel CB radios out there than 40 channels. I don't know about other members here on this group, but i live in a town in Indiana with a pop. of about 14,0000 and i can scan on all 40 channels and it is just quit as quit can be. There is no CB people here in
this town anymore. CB radios is just a thing in the past since cell phones has taken over. When i moved here in this town there was a lot of people on the radio. And i was told that there was a big power war going on who had the biggest linear. One guy here won that war and ran everyone off the radio. I have been on the CB for over 40 years. And i am not going to let anyone run me off the radio. I swear to you that people here are giving there stuff away. Not asking any money for them, just giving them to you. Yes i am an old CBer and i will be until i die. Thanks for letting me blow off. I hope we keep the CB alive.

THEY ARE ILLEGAL and have been since Jan of 1978.E-Bay allows the sale of many things that are illegal and does little to stop it. The FCC is at best dose little it's self to enforce rules.

If this link still works you can look up all legal CB radios by FCCnumbers.
https://gullfoss2.fcc.gov/prod/oet/cf/eas/reports/GenericSearch.cfm?calledFromFrame=N

I have been on CB since 1960 and have a license back into the early 60's I hold a FCC radiotelephone license(first class issued in 1967) I have been licensed as a ham for close to 45 years and now hold a extra class ham ticket.

I fix radios for a living and have so beginning in the ARMY in 1968 and to this day for the Sheriff Office at the Jail. Right now we have to sell 1500 F-4 ICOMS and are replacing them with F-43's and the F-43 will be phased out in 2013 since it's certification will expire.

UNLESS a radio has a current certification it is ILLEGAL this applys to other radios than just CB This covers AMPS too.... I have a copy of the can order for selling amps it goes back to the 70's too.

SADLY most at the FCC are clueless drones who don't know any more about the rules that most CBers do ..... The rules covering radios run THOUSANDS of pages and many are 40+ years old

Sec. 95.603 "Certification required".

"(c) Each CB transmitter (a transmitter that operates or is
intended
to operate at a station authorized in the CB) must be certificated. "No
CB transmitter certificated pursuant to an application filed prior to
September 10, 1976, shall be "manufactured or marketed.""

This clearly just says that if you decide to continue to "Manufacture" a
23 channel radio they won't certify it. If you previously had
certification for that radio then you can't continue to
"Manufacture" it using that certification. And yes, this being the case
you could not legally sell or use it. This was to get all the
manufacturers of the radios to re-apply for licensing/certification so
that the FCC could make sure they were building radios to the new rules
and specifications.

"(a) "You must use an FCC certificated CB transmitter" at your CB
station. You can identify an FCC certificated transmitter by the
certification label placed on it by the manufacturer. You may examine a
list of certificated equipment at any FCC Field Office or at FCC
Headquarters. Use of a transmitter which is not FCC certificated voids
your authority to operate the station."

With a few exceptions, radios "Manufactured" and sold before that date
are still FCC certified for the time they were manufactured, as such
they are legal to use and sell for that reason.

All TV's currently being "Manufactured" have to be DTV ready according
to the FCC, should I stop using my TV because it does not have a digital
tuner? Is it illegal for me to sell my TV? I don't think so.

All cars currently being "Manufactured" have to be fuel injected and
must meet certain EPA and safety standards. Should the person that owns
a mint original 67 Mustang with a carburetor just crush it? Is it
illegal to sell a 1955 Chevy because it doesnt have airbags? Its all
the same thing.

This was just an old wives' tale told by CB shops and truckstop
retailers so they could sell more radios.

Oh, that was a cut and paste, what about the link?

Jim

From: Jim
Topic: 338 Message: 344

I entered just dates,

"There are no applications on file that match the search criteria specified: Grant Date From: 01/01/1976 Grant Date To: 01/01/1978"

I don't think the online database goes back far enough, the files seem to start around 1980. Midland and Uniden have files starting in 1981, President, Browning, Tram, and Gladding don't show up at all. I have a TRC-487 that shows up but that is from 96. Do you have something a little more vintage(pre-1980) you could look up?

My TRC-458 doesn't show up, all of Rat Shacks stuff shows up with an AAO(Grantee Code) in front of it, the 458 doesn't have that. The FCC Data is the R.S. catalog number 21-1581. The catalog number shows up on all the Radio Shack equipment I have seen on there as the FCC I.D. number.

Am I doing something wrong here???

The FCC computer database dose not go back that far you would have to find pre computer records. On the radio is a tag with the number if it is a 40 ch radio the certification is STILL valid.

Same goes for licenses the computer database only goes back to the mid 80's even on QRZ they go back to 93.

example .....
http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applMain.jsp?applID=629147

The FCC started computer database back in the 80's otherwise you will have to find the paper records.....

--- On Sun, 4/5/09, Jim <slprydk@hotmail.com> wrote:

So the database is useless for this debate.

23 channel radio's are illegal to manufacture and market, but the use of them is just fine.

As I understand what was said at the time --- as long as the radio in question had been installed and was in operation when the prohibition when into effect. Said 23 channel cb radio could be operated however no 23 channel radio would be operated as a new station after this date due to - type acception was granted to PLL freq generated radios only. PLL radios are tighter on the freq. Alinco as far as I know never made a CB.

So the database is useless for this debate.

23 channel radio's are illegal to manufacture and market, but the use of them is just fine.

CORRECT ..... and as long as you own the radio and had a license to use it BEFORE THE CUT OFF DATE

Licenses were not transferable so if you sold the set illegally the license was not valid so the radio became unlicensed.

YOU could use your set .... until;ll it died ... however any other 23 ch radio bought or sold is ILLEGAL to use today ..... that is what Gary said in 2001.

As for alinco ....

I used my 223 MHz as a sample to show what the look up looks like ....

It is not illegal to convert a 23 ch set to 10 or 12 meters

One of the main problems is that the FCC being basically only a subdept
of
another dept have little or no money for enforcement most if not all of
the FCC enforcement is done by volunteers so the chance of EBAY getting
busted is slim to none. How they get away with pulling your item and
letting a like item fly is that they only look at the language that you
use in the description not at the item itself.

361. Meter Light

Yahoo group: wakefield_cb_radio_UK
Date: 2009-04-17 10:16:05 UTC
From: Big Al
Topic: 361 Message: 361

I know this is a stupid question, but here goes. I have a President Zachary T base radio. Last night the meter light went out. I have not open it yet to see what kind of bulb it takes. I found one on ebay that says it is a Workman 5mm light Item number E-13 12 volt 75ma. Will this one work on it? Thanks

369. Question on Palomar 250HD

Yahoo group: wakefield_cb_radio_UK
Date: 2009-04-20 08:00:07 UTC
From: Big Al
Topic: 369 Message: 369

I need so information about this. When i talk on AM the Palomar has like a 1-2 second delay in it before i can here someone talking. Its very upsetting because as soon as i unkey the person i am talking to starts talking and i lose about 1-2 seconds of the conversation. The Palomar 250 has low,med,high for power and it does it on all of the watts. There is no setting for AM or SSB because it has automatic SSB on it. Does anyone know how or if it can be fixed. Or is it supposed to do that. Any information i can get would be very helpful. Thanks

370. Re: [wakefield_cb_radio] Question on Palomar 250HD

Yahoo group: wakefield_cb_radio_UK
Date: 2009-04-20 09:51:52 UTC
From: bruce mallon
Topic: 369 Message: 370

sounds like the RX/TX relay delay caps and carbon resistors are going bad .... if you have another one see how they compair On 6 meters I used a fast attact/ slow decay delay to keep my amp relay from chattering this might be what they used.

I have 1 also I don't use it right now, but when I did I had the same problem right from day 1. You just have to wait a couple seconds when you Key-up & hopefully when your done talking who ever you talk to doesn't start talking right away, or you will miss the 1st couple words. Even though you let go of the talk button the linear doesn't switch off right away. Its the nature of the beast @ least it is for yours & mine, its in the automatic delay.

Al....

The longer the antenna the better it will work ....
i went and looked up all of them and to be honest
You should be happy with any of them.

As for 28% more gain ......

Well maybe if your talking about a LARSON ....
Boy Dr. Larson is rolling in his grave with what they have
done to his antenna line .....

Not true the higher an antenna is the better remember for the most part simply, both antennas have to practically see each other in order to work, exception is skip or ducting but they are a phenomenon.

We are talking about the length of the antenna not its height.
ASUMING that is mounted on a car roof a longer antenna will work better
than a shorter one in the same location. AGAIN asuming that the loading coils are well designed and correctly tuned.

Ducting and skip can make even a rubber ducky look like a 50 elm beam ... anyone who has ever been on VHF/UHF has seen this effect.

Bruce

I have a Motorola CM-540 CB radio. It trans. OK and it rec. OK. The only thing wrong with it is i have no mod. on it. When i got it i had to tap the mic in order to get it to rec. I took the mic apart and sprayed it with tuner cleaner and that did it on the rec, but still have no mod. on it. It keys at 4 watts and like i said it rec very well. Does anyone have any ideals on it? I have not found a CB shop that knows anything about the Motorola CB radios. Yes it is a CB not a business band radio.

if you can get to the connections check to see if you have a reading with a ohm meter OR hook a speaker across them it will work as a poor mike.

Yes that unit is a very good radio the mics have problems, you might try finding a replace ment on ebay. Or in fact contact Motorola they might help. I have one also.

I have some very nice Motorola HT-90 radios for sale with the charger. The radios are in good shape and works as good as they did when was new. They have 2 channels, 5 watts. I am attaching photo of them, But some groups will not let you do it, so if you are interested in them and do not get the photo let me know and i will email it to you. Thanks and God Bless. The charger has a red light to let you know they are charging and a green light to let you know they are done charging.

It is true, at least, that's what I have done for years, and have had no problems. I do run the power cords on a surge bar, and leave the bar turned on, but during times of lightening, I do unplug the whole bar from the wall. This just is a safety issue for me, and I don't figure it hurts to error on the side of caution, when it comes to power surges, etc. Also just protects my electronic investment!

Stop telling God how big your storm is and start telling your storm how big your God is!

I don't know about putting the end of the cable in a glass jar but I also heard that youd better unplug it from the wall outlet so that a surge won't burn it up.

Henry

Sorry, but i do have one more question. I only have my base antenna 25 feet in the air from the ground up. I run a solar con 99. I have a noise level of 8 all the time. It never goes up or down. Could this be the problem? I am going to put it on the peck of my house witch would make it about 30 to 35 feet in the air. Do you think this would help on the noise level? It does not sound like electric noise, but my power line is only about 10 feet right now from my antenna. Could someone tell me if this will do it. Sometimes when i squelch it out i can not hear people the way it is. Thanks

What you have there is some sort of exturnel noise sorce. either a transformer or power line that is very leakey or something if your feed line is ok and your connections are ok you should not have any noise hardly at all even with the squelch turned down. You have the power co come out and check the lines or if there is a tranformer near by.

Subject: [wakefield_cb_radio] Base Antenna

Sorry, but i do have one more question. I only have my base antenna 25 feet in the air from the ground up. I run a solar con 99. I have a noise level of 8 all the time. It never goes up or down. Could this be the problem? I am going to put it on the peck of my house witch would make it about 30 to 35 feet in the air. Do you think this would help on the noise level? It does not sound like electric noise, but my power line is only about 10 feet right now from my antenna. Could someone tell me if this will do it. Sometimes when i squelch it out i can not hear people the way it is. Thanks

Right now my antenna is on a 20 ft pole that is on the ground. Tomorrow i am going to move it. I have a pitch on my house and with a 15 ft pole that will put me about 30-35 feet in the air. The pole will be setting on my roof and mounted on the a frame. What or how would you suggest that i ground it. If anyone has any suggestion i would appreciate it.

well, not sure if it's right or wrong, but here's the way I grounded my base antenna. I attached some ground wire to the base of the antenna, ran it through a hole in the top of the mast pipe, and came out the bottom of the pole. From there, I ran it over to the ground rod by the power box, that my rv is plugged into. Y'all could modify from my application, and run the green covered ground wire to the ground, next to the housde, and then drive a ground rod in the ground next to the house, and attach it there. If I am wrong, let me know guys!

Take some RG-8 and connect it to the pole and run it down to the ground and drive a ground rod in and connect it up. use only the center lead.

"Take some RG-8 and connect it to the pole and run it down to the ground and drive a ground rod in and connect it up. use only the center lead."

Now THATS a simple solution .... Here in Tampa you need to use at least a 10 foot long ground ALSO a good arestor Like a gas dischargs polyphaser is never going to hurt your chances of suviving a hit. MFJ and others also make them.
BUT .....
BUT....
BUT ....

Disconnect your antenna if you can because its the only shure way to keep from frying that radio

I have a very nice Motorola Mocat 4002 40 channel CB with power supply. Would like to trade for a Motorola CM-540 or a CM-510. The power supply is still in the box. And a Motorola WATT/SWR/MOD. Meter. 10 Watts to 100 watts. Everything works like new. Not beat up or abused

Recently you may have noticed the site has been down. The company that provides the software had a server a melt down. Everything is now back up. As we stated to some early sign ups. This site is in it's Beta faze. Though the length of time the service has been down was longer then expected we hope our service provider has corrected this from happening in the future.

In the meantime, enjoy and TELL YOUR FRIENDS to sign up. It will benefit everyone.

Sincerely,

Mike Lewis

Hi: You can sometimes Re-cut the threads with a Tap & Die set, but it really depends on how badly they are gone.
If your going to give this a try you need to go slowly when cutting the thread, use plenty of Lubrication & clean the Swarf from the hole regularly as you cut.

Good Luck: Andy @ Classic CB

Had a Kenwood radio with a hand mic that had a little lever on the back that in one direction was a regular mic and in other was a noise canceling mic. The difference was that when you moved the lever you opened vents in the rear of the mic. I guess making the mic less sensitive to ambient noise. ?? Also had a desk mic for a ROIP system and every one said that it was quite, the audio was very low, I put a pice of scotch tape across the the hole in the back of the mic and then it was good.

I hope you are having a good day. I was wondering if anyone on here is a big fan of Motorola radios? If so please email me i have some you maybe interested in. I like collecting Motorola radios and Sonar radios. A friend of mine has a CB shop that he has been in business for over 40 years. He knows how i like Sonar radios. He has so much stuff that you have to ask him about something in order to have him think of what he has. I asked him for a Sonar 2340 and he told me he had a brand new one in the box. Will he was almost right. The box from the Sonar radio corp. said on it that it was a 2340. WE open it and guess what, the company screwed up and put in a Sonar 3023. So i got a brand new 3023. Just wanted to share this with you in case you are looking for a hard to find radio or part. If so let me know and i will email his phone number and address. Thanks and have a great CB day

KINDA looking for a couple Uniden Grant XL radios they have to be made in the Philippines (from what I was told those are the best 1's) besides my wife is from there. I have 1 of the older 1's, also the newer 1 with the green lighted face. The newer 1 is going into my Hot Rod Truck (85 Dodge D150). I cant believe they stopped making a GREAT radio.

Makes me wonder if you're picking up electrical interference from some where near the antenna. Possibly an electrical device such as a transformer on electrical "phone pole".

Or, there may be a source of RF near the radio indoors. Might be picking up a stray bit of RF, if the base is too close to a radio, TV, fan, or something like that.

I don't have a definite answer, just some guessing. Did you unhook the coax from the radio, and see if the static goes down? That would help determine if it's indoors or outdoors.

Can you run the base off a car battery temporarily, and see if the static is in the AC power supply?

Subject: FYI Antenna

I am the one who asked about noise level. From ground up my antenna was on a 25ft pole so that's how high i was just 25ft. I have had a noise level about 7-8 all the time. Does not matter what time of day or night. I have been on the radio a number of years, and i sometimes would have a noise level of 1-9. a 9 when skip was rolling in. So yesterday i took my antenna down and put it on a 10ft pipe on my roof line. That makes me about 35ft in the air now. And the noise level is the same. 7-9 and never goes down. Can someone tell me if and what i did wrong? have i over looked something? Any suggestion would be appreciated. And one more thing i have brand new heavy base coax on it, so i know it can not be the coax.

Yes with antenna off i have no noise level. Now i do have a power supply next to the base that i run a little 100 watt kicker. But with the power supply off and the little kicker i still get a high noise level.

One more thing. There is a factory right behind me and the house here sets so close together, But i have seen times that the noise level is and was down here. That's been sometimes back. One more thing , i am right across from the police station. But there antenna is not on the police station, it is maybe 5 blocks from them. Right next door there are two satellites on the roof of the house. Don't know if anything like that would do anything to my noise level.

I doubt the police station has anything to do with it. Their equipment generally doesn't interfere with CB. The factory may be a concern. I can easily imagine a machine of some kind (or a roof top turbine or HVAC on the roof) throwing a lot of RF noise. The nearby factory would be my best guess.

Hi Al: Definately sounds like you are picking up interference, 1st remove the kicker from the equasion completely & connect your Co-ax direct to the radio to see if the noise goes away if it does then all well & good.
2nd I would carefully look at is the routing of your Co-ax , I had a customer not too long back who had the same sort of thing, turns out he had run his Co-ax along the underside of the soffit & above this were the cables supplying some automatic outside lights.
2 other well known contenders for causing high level interference are Computers & Central heating pumps, also look to see if there is anything in the vicinity that could interfere with your signal especially large steel structures or power lines.
If you have a mag mount or something similar try connecting this to see what happens, you didn't mention how long youv'e had this problem? Unfortunately Interference of this sort can be a pig to find / eliminate. Have also had this problem caused by Co-ax where a muppet in Maplins gave a customer 75ohm CCTV coax instead of 50ohm.

I have also had a few people tell me that my little kicker could be interfering with the police dept. radios. This i don't think so. I was in the Taxi Cab business for a long time. I ran Motorola FM radios for my cab service. I had a CB setting right on top of my Motorola radio and a Palomar 225 plus and my FM antenna and my CB antenna was on the trunk of my cars. One on each side. And not one time did i get into my Motorola radio.

I also doubt that the CB will interfere with the police band radios.

What the other poster wrote, is very good advice. Check the coax, make sure it's 52 ohm for CB, not 75 ohm for television. And check the routing of the coax, see if it's near electrical wires or devices.

Years ago, I was trying to talk to a friend whose mobile was coming in about 6 on the s-meter, Someone started to jam at about 9 on the meter, and I lost contact with the guy I was trying to reach. So having a bunch of background noise sure is a problem.

Hi Al: Yep it's possible for Sattelite dishes to give you interference, but it's usually only Motorised dishes & then only when the rotator is in operation to move them it wouldn't normally be a constant interference, the Police Radios shouldn't interfere with your CB in any way especially if they have upgraded to the tetra system (UK & Europe).
What sort of Factory is it?, has it allways been there since you moved in? have you allways had the interference problem?

Andy @ Classic CB

Hey Al: Don't worry about interfering with the Police radio, if your gear was interfering with them in any way they would have been knocking on your door pretty sharpish. I was in College with 1 of the Chief engineers from South Wales police & some of the kit he had at his disposal was awesome.

Andy @ Classic CB

You need to find where it is coming from once you know that you can work on solving the problem. If they are in violation of part 15 the FCC will step in.

I am the one who asked about noise level. From ground up my antenna was on a 25ft pole so that's how high i was just 25ft. I have had a noise level about 7-8 all the time. Does not matter what time of day or night. I have been on the radio a number of years, and i sometimes would have a noise level of 1-9. a 9 when skip was rolling in. So yesterday i took my antenna down and put it on a 10ft pipe on my roof line. That makes me about 35ft in the air now. And the noise level is the same. 7-9 and never goes down. Can someone tell me if and what i did wrong? have i over looked something? Any suggestion would be appreciated. And one more thing i have brand new heavy base coax on it, so i know it can not be the coax.

I was told by someone that a CB person was sitting out in front of the police station and was talking on his CB with the linear on and the cops came out and was supposed to arrest him for interfering with the radio stuff. I don't believe it at all. You know how some people stretch the truth. And the person that told me this is not liked by any CB person. That he thinks he hogs all channels. Big power war i guess is what happen in this town i s the reason no one is on the radio anymore. This person told me he is going to be bigger and stronger when he gets back on the radio. Yes i do have a big kicker k 500 that i could use, but i will not hook it up. If i have to have 500-1000 watts to bug someone than that tells me a lot about the person. Not only one has told me about him but a lot has. I guess he is just like trouble. I think he eats trouble like people eats candy. Yes he has bleed me many of times just getting on and ghost talk and a lot of whistling
that he does.

If he was right in front of the bldg. and they used hard wired remotes it is possible that the CB (am) signal got into the phone wire used for there radio remotes, Most it not all of the Police dispatch centers use consol remotes with the actual radio in the basement or in another room some were else in the bldg. conected to the consol by regular old phone wire (twisted par)

462. FYI On Motorola CB Radios

Yahoo group: wakefield_cb_radio_UK
Date: 2009-06-17 18:25:14 UTC
From: Big Al
Topic: 462 Message: 462

I am a big fan of the Motorola CB radios. I had one that yes i got it off of ebay, and it transmitted OK and receive OK but had no modulation on it. I took it to one CB shop and he laugh at me and said to resale it on ebay or use it for a paperweight. Yes you have to have the mic in order to use it because the channel selector is on the mic. You can not change the channels with out the mic. It is model CM-540. So i found a guy that did not laugh at me and he ended up fixing it for me. So if you have any Motorola radios that need repair let me know and i will give you his name and address. He also tuned it up for me. Said it dead keys 5 watts and will swing to 17 watts. He also said the receive was excellent. So please don't throw them away.

Yep nothing like having the right gear to fix the radios .....
I have at my home shop a lamkin gen, Marconi generator, Deviation meter, modulation scope, several spectrum scopes, watt (bird) meters and 45 years of fixing this stuff ....

And work all day on PART 90 radios for the jail.
Here at the jail shop we have a IFR-1200 it is very nice and also very old but age dosn't matter when you can still get them repaired and calabrated to NBS spects ($1300 a year)

Yep no rusty screwdriver ..... or dull dittle sticks ..... GOSH I'm showing my age everything today is going soft-pot .... and SMT .....

Bruce

Hi Al: No problem with emailing the pics, as for your question about parts for Motorola we don't actually stock Motorola specific parts as we don't see that many for repair. We do however stock a pretty large range of universal spares such as IC's, Transistors etc & source other spares as we need them from dealers from both within the UK & around the world.
Are you in the UK or US?

I work for the sheriff office here in florida. We do the radios for the jail out of the sheriff shop since we have about 1300 radios at this time here.

Yep I have at my home shop 3 tube testers ... and little tubes to test ..... several L,C,R meters but how offen do I wind coils ? A "Q" meter when is the last time I measured "Q" and a micro volt meter .... sorry but I don't go around checking that either .....

Now I make good use of my antenna noise bridge .... and even one of my grid dip meters I have 5 of them 3 work just fine the other 2 are for parts and spare coils

Some of this stuff is 70 years old but it works as well as anything new just takes a bit of know how to use it. It is useless to the newer HAMS but to us older guys it's our TOYS.

Your right it just keeps following you home from hamfests .....

BTW go to qrz.com and type in my call and look at my station from the mid 1960's

http://www.qrz.com/

just type in my call wa4gch

Thanks for the pictures. I don't see anything obvious that might be source of noise. Since the houses are close together, makes me wonder if someone in the house next door to you (on either side) has a bad appliance of some kind, that's throwing a lot of RF?

Are you able to run the radio off a car battery for testing? See if the noise may be coming in through your AC plug in power wire?

How close is your Transformer sometimes the transformer goes bad sends out RF noise & CB's pick them up so actually we could go driving around for the electrical company & find bad transformers (LOL). Trying to think of somehow to make money being LAID OFF (Michigan @ its BEST)& all that. The shop you're by could be sending bad noise some smaller shops have converters that take 2 phase current & change it to 3 phase for the machines that could of went bad. You never did say how close any of this was it could be anything like everybody else said. I'm a CNC (Computer Numerical Control) Machinist sorry FABRICATOR. That's what the company calls us Fabricators not Machinists, maybe so they don't have to pay us much like they are doing (before the 12 1/2% pay-cut). But the machines send out RF noise also being a machine controlled by a computer. When I do go to work my CB gets NOISY when I'm close to the shop.

Hi Al: Yep the CB Doctor is Billy Dean Ward, a seriously good & knowledgeable man when it comes to CB stuff.

Looking at your Pics, very good they are too.
Pic 1: Shows an outside light on the lower roofline is it automatic & does your coax run alongside it's supply wire?
Pic2: Shows you have a lot of overhead cable lines which we all know can cause trouble.
Pic 7: Shows Antennae mast, whats it for?
Pic 9: Whats the white cable that drops down the side of the window?

Have you tried disconnecting the coax from the aerial end? leave it connected to the radio & see if you still have the interference, if you do then it's being picked up by the coax drop & you need to re-route it.
I wouldn't have thought that a neighbours appliance would be causing your problem though as most appliances are used intermittently & your interference appears pretty constant.
Thinking about this last night brought back a call we had about 2 years ago, customer suddenly started having heavy interference on all channels. Cut a long story short he fell out with his neighbour & 1 night the neigbour buried a a broadband noise source & battery pack in his garden against the customer fenceline, wiped out all CB channels in a 50 metre radius.
The other thing you can do is as Bruce said: Get a handset & if this also has the interference you should be able to slowly track down the source.

Andy @ Classic CB

I can just see AL with a earphone in his ear and a direction finding loop ...... I could bring my DACHSHUND that little girl can track almost anything ...We are kidding you AL but serously we will all help ....

Now to get started just walk around with a simple radio and see if you can find the noise.

Andy ......

The noise device is illegal here but I too have seen that one .... a 2n2222 osc modulated by a 555 timer chip ..... nasty bugger ......

Hiya Bruce: Yep they're nasty little buggers alright, took me a while to find it I can tell you. Illegal here too by the waybut it doesn't stop the morons useing them to mess up the airwaves, We had 1 in a town about 10 miles from us a few years back that hated CBers & Radio amateurs (Reckoned we were all scum) so he modified an old radio to do the same thing only this time it had the added power of the radios RF output, he buried it in the ground in some local woods along with a couple of car batteries & a dusk sensor. As soon as the light level started dropping it would power up & blank out signals in a 3 mile radius, apparently he was going back & fore to change the batteries & re-charge them. I think the guy had a few screws loose somewhere.

Its hard to believe that someone would be that stupid to do something like that. Ya you are RIGHT he sure has a SCREW LOSE. But here in this town i heard that someone did the same thing. I don't know why people likes doing things like that. Right now there is no one on the radio here to talk to but the truckers. And all that was over power war. Who had the biggest linear. In all my years on the radio i hear about that all the time. Even the truckers can not get along on the radio. See that's STUPID if you run everyone off the radio than who are you going to talk to. But this guy here in my town will get on the radio from time to time just to whistle and ghost talk. I guess he was the biggest trouble maker of them all. Again this is what ex-CB people have told me. I do no back about 4 years ago i was driving back and forth 60 miles one way to work. And as soon as he heard me and the wife talking he would get on the radio just to bleed us so we could not
talk to each other. And just as soon as we could not talk anymore he would quit ghost talking. And we start talking and here he would do it again. I don't know why people gets out of doing that.

Hi Al: I know exactly what you mean, there are very few people left on in Wales now & it's a lot to do with this sort of thing.
Years ago when I first started in CB (76) we were all here to make friends & help each other out, you could chat to people all day without any bad mouthing or Mic keyers etc. I allways had a Rig screwed to the workbench & it was on from the time I opened to the time I closed, I still have a Rig on the bench but now I only turn it on to do an on air check when I finish a repair.
I think the biggest problem with these people is that their lives are so sad & empty theyre jealous of people having something they don't.

Andy @ Classic CB
P.S Keep us updated on the interference

Hi Andy

the CB scene here is still quite active there are some quite times during the Day but some local wagon drivers are using a number channels here there are some networks runing at different times sadly the Mids/fcc band is only used by two groups one a bunch of lorry drivers on AM and a network which lasts about an hour and thats it, such a shame as the Sierra Romeo club use to use ch33 allday and night and a rigs twigs and power packs channel on 31 but none of this is happening now as most of the lads have gone on to ham now.

near me there are about 10 breakers on within a 2 mile range maybe more.

hope i aint borring you too much

Dave

Hi David: No mate you are certainly not boring me. It's nice to know that in some areas what was once a great & often very useful hobby is still being kept alive.
I used to just repair CB at 1 time & was quite busy, now I repair Ham radio, Mobile radio etc to keep going & also sometimes repair the odd washing machine etc as well.
It's strange the way CB has gone over here, when it's still so strong in other countries around the world.

CB Radios aren't convenient & bulky, since the mobile phone came into our lives. Don't get me wrong I like both but out here in the BOONIES cell phones work when they want. Some of the Old-timers out here remember what a BAD RAP CB Radios got, so that's why I think they faded out. I get teased about my system (92 Lebaron Roof Mounted Wilson 5000, Grant XL) a few of them said my car looks like a remote control car. My own daughter calls it a REDNECK CHAT ROOM, & she didn't want the little Grant 510 Pro & Wilson Little Will in her car. Something went funky with her car & she couldn't reach me on the phone properly. To make a LONG STORY SHORT the CB saved the day by her getting hold of a friend & talking to him he said DONT WORRY take off.

What i should have said was that the noise dropped to zero, Put back on and noise back up to 7 and stays there. One thing i notice this morning was that on some channels it sounded jut like a airplane flying in the air. You know what i mean, like the airplane engine noise.

Topic: 500 Message: 505

Hi Al: if the interference dropped to zero when you disconnected the coax from the Antennae end then that pretty much proves that its the Antennae that's picking up the interference, the only thing left to do really is try the antennae in a different place. This is easy enough to do if you have a long length of coax with plugs on & a joiner, take your antennae down & add the extra coax you can now move it around to see where the noise is at it's lowest.
I know this is a bit of a long winded way of curing the problem, but i've had cases in the past where this was the only way we solved the problem, I wish I could give you a quick & simple cure but sometimes it's not to be.

Regards: Andy @ Classic CB

Just a few questions. I have my antenna mounted on the roof of my house on a 10 foot pole. The pole is setting on my roof. I have the coax running on my roof down to a opening that goes down into my basement. The coax runs down my basement ceiling into a hole that i drilled into the floor. And the coax comes up into the floor to my radio. I don't have a lot of money to put into this, But how do i ground it? Do i put a wire on the antenna pole down to the ground? If so what kind of wire do i need? I want to make sure that if it is hit by lightning that it will not hurt my house. And maybe it will help on the noise level. Thanks

Hey Al: Thats Quick & easy to fix mate, go to your local CB store or Tandy (Radio Shack). Buy an inline Lightning arrester, unscrew the PL plug from the bottom of your Antennae & screw the lightning arrester onto the antennae then screw your coax PL plug onto the bottom of the arrester. The arrester has a screw on the side for a ground wire, you need to get 6mm (1/4") Ground wire & run this to a 3 foot long ground rod. This will do both jobs in 1 & should'nt be that expensive to do, don't forget that where the wire goes onto the arrester you need to have a crimp lug of the right size for a good connection.

Buy an inline Lightning arrester GASP !

They are useless ......blitz-bug types are not going to help at all.

If your going to use a arrestor use a gas one like MFJ makes its about $35 but could at least HELP ......

Hey Bruce: Don't like to point this out mate but I live in the UK not USA, I looked in several suppliers catalogues after reading your reply & the only one's I can find are inline arresters. Having said that I know many people who have them for both CB & amateur stations and have never had any problems with them, an old friend of mine (sadly now gone) had an inline arrester fitted for years, his antennae took a hit but the Rig was o.k.

Pinellas county Florida has one of ther hightest lightinhg hit rates in the world.
A lone storm can produce 2,000 hits ..... The last BLITZ-BUG I has got blasted with in a week ....

From wickpeda (http://en.wikipedia.org/wiki/Tampa,_Florida)

" Afternoon thunderstorms, generated by the interaction of the Gulf and Atlantic sea breezes, are such a regular occurrence during the summer that the Tampa Bay area is recognized as the "Lightning Capital of North America". Every year, Florida averages 10 deaths and 30 injuries from lightning strikes, with several of these usually occurring in or around Tampa.[50] "

Where we are ....

http://en.wikipedia.org/wiki/Pinellas_County,_Florida

A fairly good arester ....

if you put a resonator on the ground cable it may also help to reduce the nosie level Al, when you attach the ground cable to the base of your mast tension it out in you yard/garden and make sure it dosnt touch your house after that i would wish you the very best of luck that your noise proble settles away.

This was the response to your question posted in another group:

This is fairly easy and cheap. An 8ft copper cladded grounding rod at a Lowes home store is about $6. They will have clamps to attach solid bare copper grounding wire to the rod $2 and to the mast pole $2. The wire is the priciest of the stuff you will need at $18 for a 25ft roll of 6ga. $25 if you go with 4ga. 6ga should be fine.
Do not use braided wire to ground your antenna. You may use bare solid aluminum if you can find any cheaper but I recommend the copper.

When running your wire keep the run as smooth and bend free as possible. Avoid sharp bends if posible. Do not attach this ground to your house electrical grounds. I have herd people recommending this but your house electrical system isn't capable of dirspersing a direct hit from lightning and chances are you will cook everything in your home if you ever take a hit.

I am not the author but this is the way I would do it.

Jim

When i got this radio the cabinet was rusted on it and it did not work. This is the radio i was asking about a mic or a mic cartridge for it, because it did not have any modulation at all. Like i said CB shops here just laughed at me and said use it for a paperweight. I found the CB doctor on the Internet and he said send it to me and i will see what i can do for it. He fixed it and sent it back to me in GREAT working order. And he was very reasonable about the rate he charged me. The cabinet was a little darker gray on it, but i still think it came out good. I highly recommend the CB doctor for his work. He has two web sites and here they are, Please take a look at them. www.thecbdoctor.com Thank You

Just a few questions. I have my antenna mounted on the roof of my house on a 10 foot pole. The pole is setting on my roof. I have the coax running on my roof down to a opening that goes down into my basement. The coax runs down my basement ceiling into a hole that i drilled into the floor. And the coax comes up into the floor to my radio. I don't have a lot of money to put into this, But how do i ground it? Do i put a wire on the antenna pole down to the ground? If so what kind of wire do i need? I want to make sure that if it is hit by lightning that it will not hurt my house. And maybe it will help on the noise level. Thanks

Hi Bruce,

You already have one .

do you have a copper stake to go into the ground.

Dave

OK what is a resonator ?

if you put a resonator on the ground cable it may also help to reduce the nosie level Al, when you attach the ground cable to the base of your mast tension it out in you yard/garden and make sure it dosnt touch your house after that i would wish you the very best of luck that your noise proble settles away.

From: Big Al
Topic: 507 Message: 532

See if this sounds right and OK. I am going to put the lightning arrestor that has a ground on it to put it between the antenna and coax. Than i am going to run the copper wire from the arrestor down the pole and across my roof to down to the ground rod. But from the pole across my roof i am going to keep the copper wire from touching the roof. Does this sound right? Thanks

P.S.
I had a email from someone who said i could not post pictures on the group without me sending them to him first. I emailed back and asked what group it was because it did not state the group name, but never got a reply. Would that person please email me and let me know what group you was talking about. I just want to make sure it will not happen again. Thanks

i would have thought that if the copper wire is touching the pole with your twig on wouldnt this be grounded to your house and there fore render useless kepping it of your roof.

if possible try and get a good tension on it and keep it in a straight run i and off your house/roof would have seemed better, however you could try it the way you have said and see what the result is.

I would like to thank everyone who has been giving feedback on how to ground my antenna. Also i just found my old ASL cards from the CB boom back in the 70's. Boy did this bring back memories. I sure do wish i could turn back time. We had a lot of fun with the radios. To bad the CB boom has came to a end. I don't know how many times my CB has help me out. The blizzard of 78 was one time my radio could have saved my life. I was working the graveyard shift, and i never paid Attn. to the news back than. Someone came in and said if you want to go home you had better do it now. This was about 4am. I worked in Kokomo Indiana and i lived in Greentown Indiana witch is 10 miles from Kokomo. So i set out for home. It did not look that bad in Kokomo because of all of the lights. Boy was i ever wrong. When i got out on the hi-way i could not see the hood of my car have of the time and i was pushing snow with my car. Just about everyone in Greentown had a CB. We called ourselves the channel 12 gabbers. The snow i was pushing was going under my hood on the car and making my lights go dim. I stayed on the CB with some people in Greentown in case something happen to my car. If my car quit running i would have froze to death. But the CBers stayed with me to make sure i got home OK. I made it OK but you may not believe me or not it took me 1 1/2 hours to go 10 miles. The CB would have saved my life if something would had happen back than. Now there is nothing. Were i live there is no one to talk to but the truckers and sometimes they get a bad attitude if you ask for radio check or just to talk. I would love to see the CB radios come back. I just thought i would share this with you. You have a great day and a safe 4Th of July and God Bless.

I've also had some good experiences with CB. One of the best was when I was a kid. Dad had a CB in the car. We got into a traffic jam. Someone came on and said to avoid the parking lot exit here, and go down the parallel route, and gave directions. We did, and the parallel route worked like a charm.

I've also met people on the CB I would otherwise never have met or known.

Yep, I remember them well. Even remember my callsign, KDS 9745. But now I have a different call, and along with the CB, also have been a ham op. And yes, it's too bad we can't get more people intersted in the CB radio hobby. I kinda like to think that I have a "radio communications" hobby now. Hope everyone had a safe 4th of July, and by no means ate as many hotdogs as the guy did, 68, shew, that's a lot of dogs!

548. Good Morning(Zachary T For Sale)

Yahoo group: wakefield_cb_radio_UK
Date: 2009-07-09 12:57:33 UTC
From: Big Al
Topic: 548 Message: 548

Hope everyone has a good day. I just got a President Zachary T off of ebay. You know how people is on ebay. It Transmits at 4 watts. And it does have modulation according to my meter. And i could hear myself on another radio, but i have very little receive on it. I can barley hear myself on it. Very,Very low. I hooked a external speaker to it and no help. It does have a switch for extra channels, but i have know way to test it to see what the extra channels are. It did not come with a mic, i have extra mics that i did put on and still very little audio. If anyone who has a Zachary T and would like to have this one for parts, i would be glad to sell it as is. Maybe someone can figure out how they have the extra channels in it and you may have a working radio. But please do not hold that to me. Only test i did is what i said. If anyone is interested in it please just send me a email. If you do not want to buy it i will consider trades for it. Thanks. Big
Al bigal46563@...
P.S.
I can email pictures of it to you.

The "very little audio". I read your email three or four times. I still am not able to figure out which of the two it is.

"I turn up the sound on the Zachary, and I talk into my walkie talkie. The Zachary is very, very quiet coming out the speaker."

"The Zachary, it barely receives signal."

"I transmit on the Zachary, but it's mostly throwing a dead carrier. My walkie talkie squelch opens up, but there isn't much modulation".

More detail, please? Also, give us a rough guess how much money you want for the unit. Is it a base, or a mobile? What was the item number on Ebay so we can look at the seller's description?

Yes, you're still walking, big guy. Not much action, here. I've been busy with work, and not much road time. Might be going to visit a friend, on labor day weekend. be about a ten hour haul, from Rochester NY area up into Maine. Going through Taxxachusets, and then up the eastern coast.

NYS Thruway is pretty boring. Not sure if the rest of the roads are toll roads, though.

Hello everyone!! My name is David Baker (appaloosa_kid). I'm getting back into CBs again after 30 years. I live in HOT south Arkansas. I'm tring to learn as much as I can about putting in a base unit. I live in the city of Camden,AR so I'm tring not to blow anyones TV up around my neighborhood. Right now I'm putting in a Cobra 89GTL, but I want to put in everything (antenna and coax) that when the time and money come I can switch to a Galaxy 2547 that has been worked on by Radio Active Radios,and not re-do anything. So I ask that anyone with suggestions please feel free to let me have them, but don't get to technical.
Thanks,
appaloosa_kid

Good morning to everyone. No i have not got my antenna grounded yet hope to get it done today. Just got everything i need to do it with. I got my lightning arrester, 10 gauge wire and the ground rod. When you are on a fixed income you have to get what you can. Here is a funny part of this. Remember how i said i have a noise level of 7-9 all the time? Well the other night we had a Storm, and the next morning i turned the radio on and my noise level dropped to 3. But it is right back up again. I am hoping the ground will help a little bet on the noise level. I finally hooked my Kicker K 500 up and i talked all over. From Calif to Fl. Will hope everyone has a great day and God Bless

Al, the best thing I could say, is that the lowest loss coax is the best, in that more of the signal, epsecially with the helper, will be concentrated to the antenna. I personally would go for 213, or equivelant for the jumpers, and if I were really wanting the absolute best low loss feedline, then Heliax or LMR 400 hardline.

The fat coax is supposed to handle higher amperage, and less line loss. So you get more receive, also.

For jumpers RG-58 will make no diffrence.

EVEN ON 440 MHZ WE USE RG-8X it is low loss 58 ....

NOW FOR LONG RUNS LMR-400 is a best bet ......

From what was said and the appearence it would seem to me to a matching network. connect it to the antenna lead and then to an SWR meter then to a radio, the radio and adjust to lowest SWR. Just a guess.

Al, the best thing I could say, is that the lowest loss coax is the best, in that more of the signal, epsecially with the helper, will be concentrated to the antenna. I personally would go for 213, or equivelant for the jumpers, and if I were really wanting the absolute best low loss feedline, then Heliax or LMR 400 hardline.

HT-90/440 radios

I worked on them for almost a decade they are very good radios for that time.
If you do buy them try and get a supply of the small flat PTT levers (as of a few years ago motorola STILL had them) since after many years they can crack.
 They use a tone card and are rock bound but are very stable.
I had 4 of them untill just a few years ago when i replace them with programable ones .... even at their age 20+ years these radios will outlive all of us .....

Read only if you have time for God
Let me tell you, make sure you read all the way to the bottom. I almost deleted this email but I was blessed when I got to the end

God, when I received this e-mail, I thought...

I don't have time for this... And, this is really inappropriate during work.

Then, I realized that this kind of thinking is.... Exactly, what has caused a lot of the problems in our world today.

We try to keep God in church on Sunday morning...

Maybe, Sunday night...

And, the unlikely event of a midweek service.

We do like to have Him around during sickness....

And, of course, at funerals.

However, we don't have time, or room, for Him during work or play...

Because.. That's the part of our lives we think... We can, and should, handle on our own.

May God forgive me for ever thinking...

That... There is a time or place where..

HE is not to be FIRST in my life.

We should always have time to remember all HE has done for us.

If, You aren't ashamed to do this...

Please follow the directions.

Jesus said, 'If you are ashamed of me, I will be ashamed of you before my Father.'

Not ashamed?

Pass this on ONLY IF YOU MEAN IT!!

Yes, I do Love God.

HE is my source of existence and Savior.

He keeps me functioning each and every day. Without Him, I will be nothing. But, with Christ, HE strengthens me. (Phil 4:13)

This is the simplest test.

If You Love God... And, are not ashamed of all the marvelous things HE has done for you...

Now do you have the time to pass it on?

Make sure that you scroll through to the end.

Easy vs. Hard

Why is it so hard to tell the truth but Yet so easy to tell a lie?

Why are we so sleepy in church but Right when the sermon is over we suddenly wake up?

Why is it so easy to delete a Godly e-mail, but yet we forward all of the nasty ones?

Of all the free gifts we may receive, Prayer is the very best one....

There are no costs, but wonderful rewards... GOD BLESS!

Notes: Isn't it funny how simple it is for people to trash God and then wonder why the world's going to hell.

Isn't it funny how someone can say 'I believe in God' but still follow Satan (who, by the way, also 'believes' in God).

Isn't it funny how you can send a thousand jokes through e-mail and they spread like wildfire, but when you start sending messages regarding the Lord, people think twice about sharing?

Isn't it funny how when you go to forward this message, you will not send it to many on your address list because you're not sure what they believe, or what they will think of you for sending it to them

Isn't it funny how I can be more worried about what other people think of me than what God thinks of me.

I pray, for everyone who sends this to their entire address book, they will be blessed by God in a way special for them.

I will never look at a deck of cards the same again. Will you ??

  Here is a new way to look at a deck of cards!!
Please do not delete! You will be glad you didn't.

Deck of Cards

It was quiet that day, the guns and the mortars, and land mines for some reason hadn't been heard.

The young soldier knew it was Sunday, the holiest day of the week.

As he was sitting there, he got out an old deck of cards and laid them out across his bunk.

Just then an army sergeant came in and said, 'Why aren't you with the rest of the platoon?'

The soldier replied, 'I thought I would stay behind and spend some time with the Lord.'

The sergeant said, 'Looks to me like you're going to play cards.'

The soldier said, 'No, sir. You see, since we are not allowed to have Bibles or other spiritual books in this country,

I've decided to talk to the Lord by studying this deck of cards.'

The sergeant asked in disbelief, 'How will you do that?'

'You see the Ace, Sergeant? It reminds me that there is only one God .

The Two represents the two parts of the Bible, Old and New Testaments

The Three represents the Father, Son, and the Holy Ghost .

The Four stands for the Four Gospels: Matthew, Mark, Luke and John .

The Five is for the five virgins there were ten but only five of them were glorified.

The Six is for the six days it took God to create the Heavens and Earth.

The Seven is for the day God rested after making His Creation.

The Eight is for the family of Noah and his wife, their three sons and their wives -- the eight people God spared from the flood that destroyed the Earth..

The Nine is for the lepers that Jesus cleansed of leprosy He cleansed ten, but nine never thanked Him.

The Ten represents the Ten Commandments that God handed down to Moses on tablets made of stone.

The Jack is a reminder of Satan, one of God's first angels, but he got kicked out of heaven for his sly and wicked ways and is now the joker of eternal hell.

The Queen stands for the Virgin Mary .

The King stands for Jesus, for he is the King of all kings .

When I count the dots on all the cards, I come up with 365 total, one for every day of the year.

There are a total of 52 cards in a deck; each is a week - 52 weeks in a year ..

The four suits represent the four seasons: Spring, Summer, Fall and Winter.

Each suit has thirteen cards -- there are exactly thirteen weeks in a quarter.

So when I want to talk to God and thank Him, I just pull out this old deck of cards and they remind me of all that I have to be thankful for.'

The sergeant just stood there. After a minute, with tears in his eyes and pain in his heart, he said, 'Soldier, can I borrow that deck of cards?'

Please let this be a reminder and take time to pray for all of our soldiers who are being sent away, putting their lives on the line fighting

Prayer for the Military.

Please keep the wheel rolling.. It will only take a few seconds of your time, but it'll be worth it to read on....

Lord, hold our troops in your loving hands.

Protect them.

Bless them and their families

I ask this in the name of Jesus , our Lord and Savior.

Amen

When you receive this, please stop for a moment and say a prayer for our servicemen and women all around the world.

There is nothing attached, but this can be very powerful.

Of all the gifts you could give a Soldier, prayer is the very best one.

Do not stop the wheel, please -- just send this on.

When forwarding, please keep this letter clean by deleting all forwarding information from the subject line and from the top of the letter.

586. Cherokee Nightrider 150

Yahoo group: wakefield_cb_radio_UK
Date: 2009-08-05 13:01:54 UTC
From: Big Al
Topic: 586 Message: 586

Hello and Good Morning everyone.
Not to long ago i bought a Cherokee Nightrider 100. And now i just got a Brand New still in the box a Nightrider 150. There is only just a few CB shops around here were i live. And none of them seems to know how to work on anything. I got me a Motorola CM-540 CB and had to send it over 500 miles away to get it worked on. Only thing it needed was a mic cartridge. I also got a Motorola CM-510 that needs a mic cartridge. How ever i did find out one thing that i did not know. I have several Motorola Mocat CB mics. And the cartridge in them will work on the CM-540 and the CM-510. I know its hard to find parts for these radios. Was not sure if anyone had any of the Motorola CB radios and has the same problem with them, that if they had a mic for a Mocat that it will work. I know its a lot easier to get a Mocat than the system 500 series. I know the 500 series has a built in power mic and that why i thought maybe the Mocat mic cartridge would not work, but i
was wrong. Just thought i would pass this along in case no one new about it. But here is my question. Can the Nightrider 100 and the 150 have extra channels put in them? If so does anyone know how many extra channels you can get out of them? I had a CB shop tell me they do not make any boards to do this with. I know a long time ago i took my radio to a friend that is no longer living now and all he did was put switches on and jumped a few wires and i had extra channels. Can anyone tell me anything on the Cherokee Nightriders. I plan on keeping them. They are beautiful at night all lit up. Thanks and have a great day.

The CB Doctor has been pestering us to give all the current members free Gold member status to help get the membership numbers up. He's right. The more people we get on the site the better the interaction we will have.

You will have all the features available to you except commercial/business listings. You can sell you personal stuff in the classifieds, post video and much more. We just ask if you're in the business of selling and repairing CB radios that you sign up for the VIP plan. (VIP Members get display ads as well).

Now we do monitor the classifieds and if we feel you are "in the business" we'll let you know.

So over the next few days all members will become Gold for the Month and anyone you refer during the month of August will also get Gold membership for a year. So let your friends now to sign up by August 31st and get "The Gold" for a year.

Subject: [CBRadioTalk] Thank You

I would like to thank everyone who emailed me wanting to help me with the frig. I thank the good load that it is going to be fixed for free. I found out it was on a recall list and the company is going to fix it. Again i thank everyone.

From: Jim
Topic: 593 Message: 593

I have a TRC-448 going on ebay Sunday night, it wont be hard
to find, it should be the only one with blue LED's. I have lots of time and parts in it,
but no time or money to finish. I did post a couple of pictures.

From: Big Al
Topic: 594 Message: 594

If you are going to ground the CB base radio inside, were would you put the ground wire on the radio and were would you put the ground wire from the radio, What is the best way to ground it? Do you run the ground wire to a water pipe?

From: Big Al
Topic: 595 Message: 595

I don't know if anyone knows this or not. But Maytag witch is owned by Whirlpool corp. is recalling refrigerators. Crosley is one of them. If you own one you need to check to see if yours is on the recall, because it can catch on fire. I know because mine went out and thank god there was no fire. You can look it up at www.repair.maytag.com or call 1-866-533-9817 and they will fix it free of charge.

Just got a defective email from you. Had the group name in the subject line, but wouldn't reply to the group. I tried several times. Had to copy the information into this email, which does work properly.

I'd expected about that much. The more I think about it. It's a very fair price. However, the once in a while I use wrench sockets, I've got what I need. And if I need just one, I go to the store and buy one. Have you considered Ebay, or sorting them out into sets?

You would attach one end of the ground wire to the metal chassis of the radio and the other end to a COLD water pipe. The reason I say COLD water pipe is due to the many ways water can be heated. You would not want to ground to a pipe that is connected to any combustable fuel, as a water heater using natural gas, or heating oil. Otherwise it may be an explosive experience...

I'd like some more details. Supposing I ground a radio to the hot pipe. Please walk me through the process of how we go from there to explosion. I've been considering put a CB in the bedroom of my trailer, and the closest pipe is through the wall, to the water heater cabinet. Of course, the closest pipe is the hot water. I've never considered that an explosion hazzard. How does that happen? I've only got one mobile home, and don't want to explode it.

Your looking at 10,000 AMPS and that can melt a copper pipe HOWEVER copper is a very good conductor and that just what you want .....

IF you MELT the 10 foot pipe in your yard who cares .....

If you MELT the hot water pipe you have one hell of a mess ......

In a manufactered home I belive that it would be a mute point as most of them today are PVC water pipes I know that my parents new double wide that cost almost $50,000 thats right 50,000 dollers was all PVC which as I am sure you know is a nonconducter of electricity. I would dive a ground rod into the good terra firma and contect the ground wire there be sure to make sure that the wire is a short as possible so that it does not become hot from RF. Manufactured homes are sort of esey to do that just drill a hole put a piece of PVC pipe thru the hole caulk it good and then run your wire thru the pipe when thats done plug both ends of the PVC pipe with caulk. The pipe only needs to be slighly larger then you ground wire. Just my two cents.

First of all, do NOT use the hot water pipe for a ground wire. It is NOT a good connection through the water heater. The junction of the HOT water pipe is insulated of sorts where it screws into the tank, either with pipe dope, not too common today, or teflon tape on the threads. Either do it right, ground rod, or else to the cold water pipe. Cold water pipe is still a poor ground for the same reason the hot water pipe is, unless you ground it to the pipe where it comes out of the ground. That is the place to connect a water pipe ground. Anything else, is playing with the devil, and could get you hurt.

Just a WAG, cause copper is a much better electrical conductor than steel. Less resistance. I presume that copper pipe is pounded into the ground?

They sell ground rods at any building supply, Home Depot, Lowes, etc. You can get them in steel or copper, copper costs more. Driven into the ground at the base of the antenna is the best place to locate it, and use a lightning arrestor in the antenna cable and run a #10 ground wire from that to the ground rod. Nothing will stop a direct hit from lightning. Mostly, you are draining off the static charge building up on the antenna during a storm, and anything that is induced into the antenna, cable, tower,etc from a near hit. Hopefully, the tower will take the hit, and not the antenna itself. Unless you take a direct hit to the water heater gas line, chances of blowing up the heater are slim to none. Not too many heaters are installed on the roof or antenna structure, so something else will take the hit first, like your radio.

If you can read this, thank a teacher
and, since it's in English, thank a soldier

Have a nice day and Be Careful With Your Donkey

Just a WAG, cause copper is a much better electrical conductor than steel. Less resistance. I presume that copper pipe is pounded into the ground?

If that's the case, why does everyone say use a copper rod for the ground rod. I just got a 5ft copper round pipe to clamp my ground wire on.

I don't no if i told the group about the mobile antennas i have for sale. All of them are brand new never been open. I have to be honest about this, but i never heard of the Sirtel antennas until i got the ones i have. I did some research on them and the only thing i could find out was that they say they are good as the Wilson antennas on the market today. How i found out was i put one on ebay and a lot of people bid on it. So i had to ask them about why they wanted it. And that is what i was told by the bidders. I can take pictures of them if you are interested in any of them. Here is what i have.
SIRTEL S 90 A ROCKY
SIRTEL LINEA 1500 I HAVE 2 OF THEM
SIRTEL 102 INCH FIBERGLASS WHIP
If anyone knows anything about them or if you would like to buy them please let me know.

I came up with a idea of running my 10 gauge copper wire though a rubber garden hose all the way to the lightning arrester to the ground rod. This way i can be able to tape it to my antenna pole to make it look nice. What does anyone think abound this?

A couple concerns come to mind. First, if you take a lightning strike, it will probably heat up the wire, and melt the hose.

Second, the wire isn't all that big, you ought to be able to tiewrap or tape it on the house side of the pole, and it won't be that obvious.

ok, so what if ya were to run the ground wire from the top of the pole, where it's attached to the antenna, and go into the center of the pole, and go to the ground rod? I'd rather do that than take a chance of the neighbors asking about the water hose on the pole.

Well, gee. What's more likely to attract attention? A garden hose, or a piece of wire strapped to a metal pole? May as well tape on a couple dozen turkey tail feathers, and some white teflon burger flippers on with the garden hose. Just tell em Colonel Sanders bailed out of Santa's sleigh, and got impaled on your antenna, which is bolted to the side of the house (git im, Al! He said side of house, again.).

Some people are smarter than others when it comes to radios and radio repairs and how to set up radios to be safe from lightning and so on. No i am not smart on any of this. All i know how to do is put up the antenna and run coax to it set the standing wave and you are ready to go. I don't like being make fun of because i have never grounded a antenna before in my life. What a lot of people is saying just does not seem right to me. If your antenna is on a metal pole and that pole is setting on your roof and lightning hits the antenna even if you have the ground wire taped to the pole its going to still hit the house, because the ground wire is now on the pole that sets on the roof. I could understand if the pole was from the antenna all the way down to the ground and not setting on the roof. But if lightning hits it it is going to hit my roof. I have to come down with the ground wire make a turn go over to the roofs edge and make another turn down to the ground rod. This is what i was trying to say was i wanted the ground wire not touching the roof at all. I just figured that the hose would keep the wire off of the roof. That's all i was saying.

I tell you that you can not beat the old CB radios back than. They was like a Timex watch took a beating and just keep on going. I had a white face Johnson that had about 5 0r 6 channels in it. Put the piggy back on top of it plunged in the crystals that i wanted for the channels. The Very Best radio i ever had back than was a Sonar FS-23. It would out talk everyone. So back in the 70s when radios was so popular, i went out and got me a brand new Sonar FS-3023. I think i paid 400.00 for it back than. I guess the reason it was so much was because it was made in the good old USA. Back in the 70s if you did not have a good radio with good channel rejection you would get bleed over all the time. And back than a lot of people ran power. Were i lived no one ever heard of a Sonar, until i got mine. Just about everyone in that small town had a CB radio. The Sonar says it has a channel rejection of 80 or better rejection. And believe me it did. Back than if you
wanted help to put up a antenna there would be all kind of people coming over to help you. Now days all they do is just watch and laugh. But back on the Sonar i had people coming over to see it and they did not believe me on the channel rejection. I had a mobile set out in front of my house and just start talking. Yes i did get some bleed over, but do you know i could go to another channel and talk and be able to hear them even with that mobile setting in front of my house almost right under my base antenna. I still have that Sonar and it works as good today as the very first day i got it new. You just can not beat the old radios. I love to collect them. I just restored a Motorola CM-510 and a CM-540. I have seen them on ebay go for a very high price. So i did so research on them and found out why the Motorola CB radios was so expensive back than and why they are collator items today. Motorola built there CB radios like the business band radios tough.
When Cobra, Uniden and so on started making radios from Japan Motorola could not compete with them. So the very last radio Motorola made was the CM-540. And they did not make very many of them because people could not afford them, when you could go out and buy a Japan made radio. So if anyone has a Motorola CM-540 and want to make some money, put it on ebay. I got both of mine off of ebay. The only thing about the CM-540 and the CM-510 was the mic cartridges does not last that long for some reason. I have 7-8 Motorola Mocat CB radio mics and the cartridges last in them and you can take the cartridge out of them and put them in the CM-540 and the CM-510. How many old CBers are on here from back in the 60s and 70s?

Hell I took my Messenger 1 and hooked it to a taylor filter to bring the SWR down then hooked that to a huge tv antenna in the actic, it scared the shit outa me with all the noise it picked up that wasn't on the 1/4 wave. But man did it get out all over in the direction it was pointed down into the USA.

Big Al wrote:

You know i can even remember using a coat hanger or a TV antenna to talk around town. A lot of people back than did the same thing. I have even took a 102 inch whip and just leaned it up against the chimney to talk around town, I have do this many of times back in the 60s and i NEVER did blow up a radio.

The funny thing is none of us knew much when we first started in radio. I knew nothing years ago when I started out but I got to know a bunch of guys who had been on radio for 30 plus or 40 years. I talked to them and hung out with them and they taught me. The one that impressed me the most was an old timer who owned a hardware store. When CB Radio was only 6 channels he could add extra channels to that radio and boot it to 23 or 40. 6 channel CB' s was a long time ago like 50 years almost. Let's see somebody beat that!

I tell you that you can not beat the old CB radios back than. They was like a Timex watch took a beating and just keep on going.

CY: They did make some rather good equipment.

I had a white face Johnson that had about 5 0r 6 channels in it. Put the piggy back on top of it plunged in the crystals that i wanted for the channels.

CY: When I was a teen, the boy a couple doors down had a six channel mobile (on a power supply) at home, which worked fine. No S-meter, even.

The Very Best radio i ever had back than was a Sonar FS-23. It would out talk everyone. So back in the 70s when radios was so popular, i went out and got me a brand new Sonar FS-3023. I think i paid 400.00 for it back than. I guess the reason it was so much was because it was made in the good old USA.

CY: Glad you liked it.

Back in the 70s if you did not have a good radio with good channel rejection you would get bleed over all the time. And back than a lot of people ran power.

CY: For sure. I usually had to turn up the squelch a bit.

Were i lived no one ever heard of a Sonar, until i got mine. Just about everyone in that small town had a CB radio. The Sonar says it has a channel rejection of 80 or better rejection. And believe me it did.

CY: Neat stuff.

Back than if you
wanted help to put up a antenna there would be all kind of people coming over to help you. Now days all they do is just watch and laugh.

CY: I've been on the roof of a lot of houses, and helped install a lot of antenna.

But back on the Sonar i had people coming over to see it and they did not believe me on the channel rejection. I had a mobile set out in front of my house and just start talking. Yes i did get some bleed over, but do you know i could go to another channel and talk and be able to hear them even with that mobile setting in front of my house almost right under my base antenna. I still have that Sonar and it works as good today as the very first day i got it new. You just can not beat the old radios.

CY: Glad you still have it. I lost some equipment over the years. Sold some, loaned some out and not got it back. That kind of thing.

I love to collect them. I just restored a Motorola CM-510 and a CM-540. I have seen them on ebay go for a very high price. So i did so research on them and found out why the Motorola CB radios was so expensive back than and why they are collator items today. Motorola built

OK that is sound logic however with voltage and amperage that occurs with lighting weather or not the wire is in contact with the roof is probably not a concern. Lighting is a funny animal with a strange mind of its own. I have seen lighting strike a power pole with a transformer, the transformer blew up - the oil inside was vaporized and the lid was propelled a hundred or more feet into the air. At the same time I have seen lighting strike a windmill electric generator with no effect, lighting is weird for sure. What grounding does is not protect your antenna or house from a strike, what it does is make your house / antenna more or less the same charge as the rest of the area, there by making is lest attractive to a lighting strike. Also in a venue of this nature you will get all sorts of different experince levals, and different thoughts on your question. Good luck with your project.

Henry

Subject: [wakefield_cb_radio] Ground

Some people are smarter than others when it comes to radios and radio repairs and how to set up radios to be safe from lightning and so on. No i am not smart on any of this. All i know how to do is put up the antenna and run coax to it set the standing wave and you are ready to go. I don't like being make fun of because i have never grounded a antenna before in my life. What a lot of people is saying just does not seem right to me. If your antenna is on a metal pole and that pole is setting on your roof and lightning hits the antenna even if you have the ground wire taped to the pole its going to still hit the house, because the ground wire is now on the pole that sets on the roof. I could understand if the pole was from the antenna all the way down to the ground and not setting on the roof. But if lightning hits it it is going to hit my roof. I have to come down with the ground wire make a turn go over to the roofs edge and make another turn down to the ground rod. This is what i was trying to say was i wanted the ground wire not touching the roof at all. I just figured that the hose would keep the wire off of the roof. That's all i was saying.

There's a big difference between making fun of a person, and having a laugh about what the guy is doing. I think a garden hose pointing towards the sky is a bit of a giggler. Using the hose to keep the wire from rubbing on your roof, well, that makes a bit of sense.

If there is no such thing as a stupid question, maybe there is no such thing as a reply that makes fun of you?

I think you're a bit over sensetive. I didn't read anyone making fun of YOU, they had a lot of fun with the idea of a garden hose up the side of the pole. Big differnce.

The only reason i wanted to use the rubber hose is to keep the bare ground wire off of my roof. My antenna is not on a tower. It is mounted on the peak of my house on a 15ft pole, witch the pole sets right on my flat part of the house. I just figured if lightning hits the antenna it would travel down the pole and with the bare wire it would catch my roof on fire. I figure that if i used the hose it would perfect my roof. Because i would have it running down the pole witch like i said is setting right on my roof and not the ground. Than i would run it across the flat part of the roofs edge and right down to the copper ground pipe.

I have never had good luck with craigslist. I do not care that much for ebay at all. But i have sold things on ebay that i would have bet that is would not sell or i would not get much for it. Turns out i got more than i thought i would. Like i said i do not care for ebay, but it works for me sometimes. When it comes to CB radio its very strange anymore. I have seen things go on ebay that i would not even give a 1 dollar bill for and it went for a high bid. I guess it all depends on what you are looking for. There is a site that has auctions on the weekend. Sometimes you will see a CB on there up for bid. On the site they do have pictures of stuff they are selling. I have gotten a box full of CB stuff from them for 10.00. It is in Michigan, but they do ship things to you. The site is called Red Star Auctions. There auction web site is www.redstarauctions.com

Bob, I read your original post but I haven't kept up with all the comments. However, if your items are in good condition I would not call it "a basket of stuff that just isn't worth very much". I would have to say that it is not a seller's market right now as I buy and sell and money is tight around here. If you wish to sell them I would definitely like to know what you want or work out something. I am sure there are others on here willing to make an offer. I am interested in the Astatic mic and any amps you want to part with. If you want to take offers, then let me know. It would help if you could post photos of the items as no one likes a pig in a poke.

Hi boys,

I'd like to thank the guys that responded to my original post. I was surprised at the number of people that took the time to help. It is deeply appreciated. It sounds like I have a bushel basket of stuff that just isn't worth very much. I entertained the thought of installing one of the CBs in my truck, but I'm not sure it's fun anymore. I guess I'll give it some thought.

Thanks again guys, Bob

I know I paid a bunch of money for the SBE Console V. I bought it new in 1978, and the shop I bought it from opened it up so it has like 97 channels. I bought a new Astatic Golden Eagle mic matched to it. I used it for a year and packed it away. I ran it with a 150 watt mobile linear powered by a 12 volt, 20 amp power supply, which I still own. I also have a 140 watt mobile linear with a remote switch which can be mounted to a dash or console. I used that with my Cobra 40 channel mobile which has also been opened up to lots of channels and has a Turner power mic installed. I have a Courier Gladiator mobile with a 4 position switch mounted to the bottom which adds too many channels to count. Also have 2 or 3 other mobile radios and a brand new(in 1978)Turner Sidekick mobile mic. If anyone knows the value of this stuff, and if you have the time, I would appreciate knowing.

$50 For the Homeless
I recently asked my friend's little girl what she wanted to be when she grows up. She said she wanted to be president some day.
Both of her parents, liberal Democrats, were standing there, so I asked her, "If you were president what would be the first thing you would do?"
She replied, "I'd give food and houses to all the homeless people."
Her parents beamed.

"Wow... what a worthy goal." I told her, "But you don't have to wait until you're president to do that. You can come over to my house and mow the lawn, pull weeds, and sweep my yard, and I'll pay you $50. Then I'll take you over to the grocery store where homeless guys hang out, and you can give them the $50, you earned, to use toward food and a new house."

She thought that over for a few seconds, then she looked me straight in the eye and asked, "Why doesn't the homeless guy come over and do the work, and you can just pay him the $50?"

I said, "Welcome to the Republican Party."
Her parents still aren't speaking to me.

I lived in a little town called Greentown, it was about 10 miles from Kokomo Indiana. The whole town was on the CB. We formed a club called the channel 12 gabbers, that's the channel we stayed on, which i am still on channel 12. One of the most popular base antenna back than was and not sure if this is how it was spelled. It was called a super mag. I remember going to a CB shop in Kokomo that was called Lafayette radio. I told them i wanted a good base antenna. He sold me a super penetrator. Back than the PDL beams was very popular. God as my witness that penetrator would walk all over the PDL-2. I was 30 feet in the air. I would throw a better signal with it than the PDL-2. I would love to have that antenna back. Again back than people always wanted to come and see what kind of rig you had. And yes if someone needed help to put up your antenna, all you had to do is ask and 20 people would show up to help you. Here were i live now, they was a lot of people on the CB, but i guess they had a big power war and the number one person that started it is still on the air. He ran everyone off. I was not here at that time, but had a lot of people tell me that's why they are not on the radio anymore. I collect CB radios so i stay on 12 to test them out and guess what? That person who ran everyone off came in and started talking to me. I just pretended i had no idea of what happen. Of coarse he blamed the others. He said he had a 80 foot tower with a set of beams he wanted to put up, but could not find anyone to help him to do it. He also told me he told everyone he was going to come back bigger and stronger. I have not heard him in sometimes now. I was told what CB people was left here is talking below channel 1. I don't know because all my radios has not had any screwdrivers in them, just 40 channels and that's it. A lot of what i call so called CB shops here will not put extra channels in your radios. And i don't know anyone here that does it. I know there is a lot of people out there that can do it, but i have no idea who they are. Its to bad we have to set at the computer and talk about the good old days and not on the radio. Everyone have a great day and God Bless what is left of the CB person out there.

Only skip that came in last night was on channel 6. It seems strange that skips happens in the summer. I can remember it rolling in the winter time when people staying inside. Now it seems as people are staying in summer time. I took my base out of line and put my Motorola CM-540 in line. I don't know if Motorola was the only radio made that you can program to search all 40 channels. So that's what i did so i could scan channels to see if anyone was on the radio. It makes it so nice to be able to set back and scan the channels without turning the channel selector. Its cool to do that. Well everyone have a GREAT CB DAY AND GOD BLESS

When I broke my Right Leg (Titanium from hip-knee / 15 screws with Stainless ankle area) Jan 05 bad snowmobile accident, I was on morphine. I had a HAPPY BUTTON cycled every 7 mins if I wanted it. Two of my CB Buddies called me @ the hospital (1 of them I borrowed the snowmobile from)they were on speaker phone both of them thought I would never walk again from the way I was talking, I'll be HONEST I dont remember the conversation @ all. It went all around Ch # 17 (the local ANIMAL CHANNEL) Pt Huron, MI Thumb Area that I wouldn't walk again. So I think I know what you are going through, never done drugs & never will. I stayed in the hospital 17 days, it wasn't fun @ all.

There is a guy that just got his license not to long ago by Pt Huron, MI area. He is doing both also, I think he is PUNK but whatever you'll have that with some CB'ers like everything else.

Well here in Indiana still no skip. A little skip on channel 6 but i can not understand the black slang they use half of the time. Again please do not take this the wrong way about black people. I have tried to shoot skip on 6 but it seems as if they ignore me. I think the 102 inch whip is sold. If not i will go down the list and let the next person know. I see there has be questions on a power supply. I have a Palomar 250HD and a RM Italy mobile linears. I myself went on ebay and believe me i do not care that much for ebay, but i did get two power supply of of ebay. The person i got them from makes them out of computers. I am very happy with them and they was not as much as the name brand ones are on ebay. I paid about 15.00 for them and they do the job. They will power and run both linears with no problem at all. I also have some Motorola business band radios that is 50 watts per radio and they will power them also with no problem. So you may want to
go on ebay and see if you can fins one. Well everyone have a great CB day and God Bless.

Hope everyone is well. So far there is no skip here in Indiana, unless you want to try channel 6. They must sure run a lot of power. I have had them bleed me 2 channels away. Still no locals to talk to here. I still have my radio set to scan all 40 channels and the only thing i hear is the truckers on other channels talking to each other. I still have some Sirtel mobile antennas for sale. As far as i know the 102 inch whip is sold. Two of the Sirtels are 5/8 wave. Have a great CB day and God Bless

Not much going on here in the great state of Indiana. No skip as of yet. And no one on any of the 40 channels. If i can get extra channels in just one of my radios i maybe be able to talk to someone. At lease that what i was told by someone around here. That there is some of the old timers are above or below. But the person that told me that is from my understanding he was one of the worst trouble maker that was on the radio. He told me that people would take a walkie talkie and tape the transmit button down and hide it next to his antenna so he could not hear anyone except a dead carrier. Have no idea if this is true or not. The power war was over when i decided to put my base back on the air. Oh well live goes on i guess. Even if there is no one to talk to i have made up my mind to still keep my radio stuff. I at one time sold all mt stuff, but like i told my wife that if i decide to quit, i will just pack everything up and keep it. No more selling my
radio stuff. Right now i am looking for a good Dosy watt meter. I had one but you guessed it i sold it. And now i need one. I am also looking for a antenna switch. I have my radio set up in my bed room and i have a work table were i restore radios and check them out. And i have to unplug my antenna from one radio to another to check them out. I just want to be able to switch from one radio to another without undoing the coax. If anyone has one that they would like to get rid of please let me know. Well everyone have a great CB day and God Bless each and everyone.

Hope everyone is having a great Labor Day. No skip as of yet. I don't ever remember the CB radio being so quit. At one time you could turn it on and hear someone talking at any hour. As i have a lot of pain it wakes me up at all hours of the night and i turn on the radio and no one on the air. Sometimes i leave it on 24/7 and just let it set there and scan all 40 channels. Will everyone have a great CB day and God Bless

Big Al ....

CB CARDS are OK since there is no awards givin for CB cards NO WAS or DXCC to be had however the entire idea of QSL is to confurm a contact.even ones that are decades old ....

Yes I have cards that are more than 40 years old address to my call and that the way it should be ...

As long as thoes who are COLLECTING them understand this I don't have a problem with that .....

Had a little skip yesterday. I still have the brand new 102 inch whip for sale. I thought it was sold but i guess the person changed there mind. Have you seen on ebay how much some of the CB radios are going for? That's what i don't understand is if all the radios are selling on ebay, how come there is not anyone on the radio anymore. Yes i do collect old radios and i like to restore them, but i also use them. I just don't set back and look at them. I was told that they should be used. I was told it is hard on a radio to just set and not being used. After i restored my Motorola CM-540 i use it all the time. I like the scan on it. What i need is a good watt/swr meter. I live only about 30 miles from were they make the dosy meters. And would you believe its cheaper to go to a CB shop and buy one than go straight to dosy to get one. All i can say is they must give the CB shops one heck of a discount on them. They want more for one at the place than the CB
shops. Well everyone have a great CB day and God Bless.

I am Planning A CB Rabbit Hunt In Olney IL In October
We will meet up in the Wal-mart Parking Lot.
I will be the Rabbit, Entry Fee Will Be $5 Per Person

I will leave Walmart And Go Park
You job will be to find me.

The person that finds me First
gets half of the entry fee.

I will park on a city street or public Property
Such as a Grocery store parking lot

I Will tell you on the air the rabbit hunt is on
I keep the mic keyed and keep talking till someone
finds me.

This is lots of fun I have done it many times.
Email me If Interested

No skip here today. I understand people going to ham radios. I myself does not want to go to ham. I have never had a desire for ham radio. One reason is i just don't have the money to put into it. Maybe one day people will be back on the CB radio. Ham radio people are very needed today. They help to keep us informed of things that is happening in the world in case of emergency. I have a lot of respect for them. To change this email a little, i am looking for a good watt/swr/mod meter. I had a dosy at one time, but i sold it. That's why when i do get everything back that i had at one time i will keep it and just box everything up if i decide to get out of the CB again. Will everyone makes mistakes. Have a great CB day and God Bless

"No skip here today. I understand people going to ham radios. I myself does not want to go to ham. I have never had a desire for ham radio. One reason is i just don't have the money to put into it."

Come on Al .....

NONSENSE ......

You can buy a working older HF ham radio in good shape for $300 and put up a G5RV dipole for $30 ..... If you just want 10 and 12 meters many EXPORT sets cover them ....

If you want a good older radio look into a FT-840 or a radio of its age and class under $400 or go for a IC-718 new for $550 you DO NOT have to spend a thousand bucks

If you need help with the test many of us will be happy to help you and QRZ..COM has the test online .....

Big Al,I would take $115.00 for the ranger 2950.I don't have the stock up and down mike,but I have a stock mike that could be wired too it and throw in a mike plug.It would have too be rewired.I could have that done,but I would have too ask a few bucks too get it wired.I have a base mike for that radio that U use all the time,but I am not selling it.They don't make them d-104 black eagle mikes anymore.The texas star modulator I will take 85.00 bucks.Its like brand new.I used that too drive the base amp on high stage only.
You don't want too drive the base amp on low or med stage,just high stage.The base amp I will take $200.00.It works fine just the pre-amp problem.This base amp has the bigger finals and upgraded with bigger rectifers.I have had this amp for a long time and its a work horse.lol.I have a dosy watt meter I would like about $50.00 and cobra 25ltd I still have too check and see if it works.I know it does.It was given too me
from a friends estate.I think it is one of the older 25ltd's that were not mad eim china.I also have a lot of stock mikes,parts like finals for radios,a few amp finals and a lot more stuff.All this stuff does work and I will not screw nobody.I will stand by it 100%.You can ask the people on 22 that knows me.Rob wildcat is a good friend of mine.Well have a great day.73,Scotty

Big Al,I will be selling my ranger 2950 mobile.Channel range is 26mhz too 32mhz.its am,fm,ssb and has dual finals.The radio has a dial watt on am,fm and ssb.I also will be selling a texas star modulator v-plus.It has a dial watt.I used it to dive my 4 pill base which I will be selling that too.It is a super star 500 watt base.
I have bigger finals in it.All this stuff works great.The base amp does have a pre-amp for receive,but it don't work all the time.The power amp works fine.The base amp has 4-MRF-454 finals.The base amp works fine.

The only problem is the pre-amp that does work off and on.I also have cobra 25ltd for sale too..If you know anybody looking for cb stuff.I also have a lot of cb parts,coax jumpers like 3 foot,6,12,18.Now I might sell my power supplly which is 70 amps peak.If I sell the power supply I will sell my 2 meter,440.220 mobile.Its a kenwood 742 mobile and my power supply is astron 70 amps,58 amps contitus and 70 amps peak.The 2950 radio I don't have up and down scan mike,but I do have a regular stock mike too go with.I will have too have it wired up for the 2950.I also have mike plugs forsale and stuff.I have a couple police scanners,but no digital
scanners.That texas stat mod-v I turn it down and drive that 4 pill base and ir does kick ass.lol.Just ask wildcat or other people on 22 about my base station.It does talk.If any body wants the base ant antron 99 and a 10 foot tripod they can have it.Just take it down.Also I have another 10 fr tripod with my ham ant. on that.They have the tripod and mast pipe if they take it down.I do want too keep the ham ant,but if I sell my ham radios I will let the ant go too.73,Scotty
I might have wildcat sell my stuff for me or I just sell it outright.My phone number is 1-313-382-5668 just ask for scotty.73

big al,I have been in cb radio for 43 years.The big al I am thinking about was on the radio in this area in the 1980's.I think you not the same big al.This big al lived in a apartment at one time and at night he would stick is base ant.thru a vent pipe which went high about the roof.He was one of my customers when I was selling cb radios and stuff.I got out of dealing in 2000.I want too sell my cb radio stuff.I don't even talk on it anymore.I got out there about 4 weeks ago.I tuned up a radio for my grandsons dad and I went too channel 22 and got a radio check.Then I tried too talk too one person and people started throwing dead keys on him.So I just left.Went I got on there people were just fighting all the time,but that happens too.I am guilty of that too.lol.I got my ham ticket and i don't get on there no more too much.Well have a fone day and sorry I got you mixed up with another big al.73,Scotty   My cb handle is scotty.

In a message dated 9/9/2009 4:42:07 A.M. Eastern Daylight Time, bigal46563@... writes:

Not sure to be honest with you. I started out on the CB radio when i was 10 years old. I lived in Elwood Indiana at that time. When i grew up i moved to Kokomo and than Greentown. We all had a CB radio in kokomo and greentown. We even had a club called the channel 12 gabbers. This was back in the 70's when CB radio was so popular. I myself will never get the CB out of my blood.

Big Al,is this the same big al from years ago.This is scotty from way back when.I seen you post on the
needle benders and just wanted too write too you away from the group.I am the scotty that used too sell cb radios and amps.I don't get on the cb radio any more.From time too time I get on 2 meters on ham,but no hf.
I am going too sell all my cb stuff.I was on the cb radio about 3 weeks ago.My grandsons dad had a cb radio that he wanted tuned up and I did take care of that.I got on 22 and talked on it for a few too get a radio check and it was working fine.He is a truck driver,but he is going too put this in is pickup truck and talk on it.Let me know if you the same big al I talked too years ago.I have a yahoo e-mail,but this one here on aol I use a lot more.Don't use yahoo that much.Well let me know and take care.73,Scotty

Hope everyone is doing OK today. I hope what i am going to say does not stir up a big fuss. After seeing the post about Mr. Nicholas it seems as if it is a big war on the radio like back in the 70'S. I do not know Mr. Nicholas at all, but i do not think this is the place to start a email war. Maybe he did sell a radio that you got that did not work. As for myself i have sold some radios on eBay that i checked and they worked just fine. Than when the person got it i would sometimes get a email that the radio did not work. Again myself has also got something off of eBay and they said it worked just fine. When i got it, It did not work as they said it did. What i am saying is this, The post office and UPS they don't care how they handle you packages. They just slam them down and yes they do break things. I sold someone a power supply that i used everyday for i guess 10 years. When the person got it he said the board inside of it was cracked. And i know for
a fact it was not like that when i shipped it out. So you see it could have be in shipping that caused a radio not to work. And the only way you can get UPS to pay for something damaged is for them to pack it for you. It does not matter how good you pack it they will say and tell you that it was not packed right. I know this because i have been there. So again if you got a radio from him it may not be his fault that it did not work when you got it. Don't want to start anything and i am not sticking up for anyone, just wanted you to know that not all things seems as it is. Thanks and have a great day and God Bless.

Hope everyone has a great day today. Well it looks like winter is coming, and i hate it. I don't know why it is , but in the winter when a lot of people stays inside, it looks like there would be a lot of skip.I know last winter there was hardly any skip at all. Maybe we will get lucky this year and do some good talking. I have a very bad spine and it wakes me up all night long. I keep my CM-540 scanning all night long, and i have never heard the CB so dead. I can remember when it did not matter what time it was you could always turn on the CB and someone some were would be talking. I hope that day comes back, but i don't think i will hold my breath on it. Maybe if all of us would start talking to people when we go out and just start talking about CB radios, we may get it back someday. Who knows. Everyone in the group have a great safe CB day and God Bless all of you.

Topic: 693 Message: 693

I finally got my lightning arrester in line yesterday, and i ran the 10Ga copper wire from it down to my copper pipe in the ground, but it did not do anything with the funny noise level i have. The noise sounds like a airplane engine. I do have a big tower close by me with some dish's on it. I was told that cell phone towers is what is doing it. I was able to raise my antenna another 5 feet in the air. I am not i would guess 35-maybe 40 feet. I guess i am just going to live with the noise level. I guess that's what i get for living right down town. Well there is no skip yet. I am hoping i can get out a little better now that i am a little higher in the air. I will be on 38 LSB tonight at 7:30 ET to see if i can hear anyone or talk to anyone. I tried to get a radio check yesterday, but could not find anyone to give me one. The truckers here gets upset when you ask them for a check. Sometimes they will not even talk to you. But i also hear them fighting
with each other on the radio. What has happen to people today. It seems as if no one can get along anymore. Oh well everyone have a great CB day and God Bless all

I would like to share to you what happen to me yesterday. I was setting in my car waiting on my wife to come out of the drug store. When i set in my car i always have my CB on. I was on 19 listening to the truckers. A stranger walked up to me and said i see you like CB radios. Of course i sad yes. He said i have a CB that i have not used in years, and ask me if i wanted it. He told me to hang on, he went to his car came back with the CB and said here it is, you can just have it. This is the Gods truth. He gave me a Pearce-Simpson 40 channel mobile. He did not know were the power cord was. I did have a power cord that would work on it. I hooked it up and boy does it work. I don't know if he has ever had it peaked or not, but it has one heck of a swing to it. It works good. I have never had a Pearce-Simpson, i know about them, but like it said i never had one. Just though i would share this with you. I really don't need it, because i am CB poor now.

699. Few Things Iam Going To Sale

Yahoo group: wakefield_cb_radio_UK
Date: 2009-09-22 14:46:51 UTC
From: Big Al
Topic: 699 Message: 699

I am going to sale a few things, If interested please just email me. Thanks.

1. I have a Motorola Mocat 4002 40 channel CB radio. It looks good and most of all it works good.

2. I have some brand new Sirtel mobile CB antennas that has never been open. Some are 5/8 wave. And one is a 102 inch whip, also new.

3. I have some very nice Motorola Maxar business band radios. I have 8 of them. The freq. range is in the 155.00. Three of them are 50 watts and 5 of them are 25 watts. All of them looks good and works good.

4. I have a VHF Business band base antenna. Freq. Range is 150-174. It is just like new.

5. Motorola power supply, It was used on the Maxar radios. Works good.

6. I have a Motorola Maxar 80 mobile radio. I have no idea if it works or not. I do not have a mic or power cord for it. If someone is interested in it, It will be FREE. All i ask is you just to pay for postage to send it to you.

I will guarantee everything to be in working order or i will give you your money back. But i can not guarantee the Motorola Maxar 80.
Thank You and God Bless

From: Big Al
Topic: 703 Message: 703

I talked to a person who has a base station about three blocks from me. We talked about the noise that i am getting. He said he gets the same thing on his. He said he drove around to see if he could find out what was causing it. He said ever time he would get close to a cell phone tower his radio would start to pick up the noise very bad. So he tells me it is the tower. Have no idea if he is telling me the truth or not. Just thought i would FYI this. I don't know if i told everyone this or not, but my house sets in town. The police station is right across from my house and the fire dept. is half a block from me and that is were the big tower is. Maybe this will help on what the noise is.

I hope everyone is doing OK. There has been no skip here, but i did find some people on channel 40 that is about 20 miles from me. But all they can talk about is how many watts they have. I heard one say he had 2200 watts. It seems to be just a few people in that group who likes to brag. I have a kicker k 500 that i hardly use,As the old saying goes (JUST FACTS NO BRAG) but i don't get on the radio and brag about it. I can remember when no one would say what they was running, because they was afraid of the FCC. No one is afraid of them now. I was told by someone that the FCC is out and about trying to catch people using power. I don't know if it is true or not. Well anyways everyone have a great CB day and God Bless all.

I wouldn't mind try talking skip with some of you with my Uniden Grant XL tell me again when the times some of you are out there & what channels, & time frames. I tried on Lower 38 the other Monday because I thought that was the channel with no avail. I'm in a mobile so my ears aren't the best, & I'm in school @ night some nights. I'm out there when I'm driving, dont have the money to set up the Cobra 2000 & it would be @ my dad's place up in the Thumb 1 hour North West of where I live.

Handle/Skip #'s: WARRIOR (8488) Channel 17/24 (or 19 on freeway)
live in Michigan

I have for sale or trade good working 40 channel Pearce Simpson Lion mobile CB. The only thing wrong with it is that it is missing the brown wood grain. The wood grain has the name and tells you what the switches are for. Pictures PS1-PS5 shows what the radio looks like now. Picture PS6 is what it looks like with the wood grain. Picture PS6-2 shows what it is missing. The radio dead keys 4 watts and has a lot of swing to it. I have no idea if it has been peaked or not. Only people around here to talk to is the truckers and all of them that i did talk to said it sounds good. I did hear it for myself and it does sound good. The person i got it from says he has the wood grain for it packed in some boxes, and as he told me as soon as he goes though the boxes, he will give it to me. I have told you all i know about this radio. Thank You and God Bless.
P.S. I don't know if you can tell or not from the pictures, But the radio is on.

I have some brand new mobile antennas for sale. The name on them is Sirtel and i was told that they are the very same as Sirio antennas. I don't know if this is true or not they just changed there name. The ones i have looks just like them. What i have is.
I have two Sirtel Linea 1500
I have one Sirtel S 90 A Rocky
I have one Sirtel 102 inch whip.
If interested please just drop me a email. Here is some pictures of them along with a picture from a catalog i got in the mail. I would consider trades.

From: Big Al
Topic: 721 Message: 721

I got a Noise-A-Nator from Wildcat CB Shop and i can not believe how good it works. I can still hear people and i don't have to turn up my volume to hear them. I can not get over how good it works. It has a switch on it were i can turn it off or on and when you do you sure can tell the difference. If you have a lot of noise on your radio like i do, i would highly suggest one of the Noise-A-Nator from Wildcat. If you want to know more about it just give him a email at wildcat2488@... and i know he will return your email. I just had to let you know how good it is and how well it works. I sure like mine.

723. Import CB on ham band

Yahoo group: wakefield_cb_radio_UK
Date: 2009-10-28 13:10:22 UTC
From: Christopher Young
Topic: 723 Message: 723

Just found th is on the net by accident:

http://www.livecbradio.com/cb-radio-frequencies.htm

"Illegal Frequencies"

a.. 28.000Mhz+ = Morse Code Ham Radio
b.. Note: If you own a Modified Export "Cb Radio" like a Galaxy or simular, "19 HIGH" is 28.085. Truckers change band selector while on channel 19 cb to "high" or "Band D" ? This causes them to talk in the "Ham Bands". Very Bad. What is worse, these truckers are speaking in the "morse code only" area of this "Ham Band". Ham operators are not legally able to use voice to tell the truckers "hey, you are talking in the Amateur Radio CW section of 10 meters".

Warning: Mobile Ham operators all over the U.S. are observing and reporting truckers talking above 28mhz (28.000+). These Hams will report the truck and it's company to the FCC. They often include video and audio evidence with their complaints. The FCC contacts the trucking company warning them of potential fines. Truckers have been fired. Companies have been fined. It is best to stay within the common 1-40. The irony being, what truckers might think are added privacy channels are actually drawing national attention.

724. Re: [wakefield_cb_radio] Import CB on ham band

From: bruce mallon
Topic: 723 Message: 724

There is no such thing as a INPORT/EXPORT ......that said there are no such thing as extra channels either... One reason the FCC is not happy is the DO-DO's that put them on 10 meters and see no problem with it ......

You have 4 watts and 40 ch otherwise it's not a cb set ....

The FCC is always open to change if someone feels this is unfair ....

Words to live by. Love to all my "weathered" friends,

Old Barns, Old People & Old Friends

A stranger came by the other day with an offer that set me to thinking.
He wanted to buy the old barn that sits out by the highway.
I told him right off he was crazy.
He was a city type, you could tell by his clothes, his car, his hands, and the way he talked.
He said he was driving by and saw that beautiful barn sitting out in the tall grass and wanted to know if it was for sale.

I told him he had a funny idea of beauty.

Sure, it was a handsome building in its day. But then, there's been a lot of winters pass with their snow and ice and howling wind.

The summer sun's beat down on that old barn till all the paint's gone, and the wood has turned silver gray.

Now the old building leans a good deal, looking kind of tired.

Yet, that fellow called it beautiful.

That set me to thinking. I walked out to the field and just stood there, gazing at that old barn.

The stranger said he planned to use the lumber to line the walls of his den in a new country home he's building down the road.

He said you couldn't get paint that beautiful.

Only years of standing in the weather, bearing the
storms and scorching sun, only that can produce
beautiful barn wood.

It came to me then. We're a lot like that, you and I.
Only it's on the inside that the beauty grows with us.
Sure we turn silver gray too... and lean a bit more than
we did when we were young and full of sap.
But the Good Lord knows what He's doing.
And as the years pass He's busy using the hard
      weather of our lives, the dry spells and the stormy seasons   to do a job of
beautifying
our souls that nothing else can produce.

They took the old barn down today and hauled it away
to beautify a rich man's house.

And I reckon someday you and I'll be hauled off
to Heaven to take on whatever chores the Good Lord
has for us on the Great Sky Ranch.

And I suspect we'll be more beautiful
then for the seasons we've been through here...and just maybe even add a bit of beauty to
our Father's house.

May there be peace within you today
May you trust God that you are
exactly where you are meant to be.

 And.................I do sincerely Thank God for my wonderful friends and
family who care about me even though I show signs of weathering

745. Antenna options for walkie talkie

Yahoo group: wakefield_cb_radio_UK
Date: 2009-11-18 14:29:14 UTC
From: Christopher Young
Topic: 745 Message: 745

My experience is that rubber ducky antenna is useless in a car. The metal car won't let the signal out. Take the same walkie with antenna socket ont he side. Adaptor like:
http://www.radioshack.com/product/index.jsp?productId=2104055&CAWELAID=107597000
And connect the walkie to a roof magnet mount antenna. That's what I do, and it's successful.

And, you can use the roof CB antenna on your house, driving it with a CB. Won't work with TV antenna.

Camping. Magnet mount vehicle antennas need some metal under the magnet. Might work off an old steel Coleman ice chest. I'll admit, I've not tried. Maybe off the top of your folded up camp stove?

Many walkie talkies come with a lighter plug cord, which is what I use in my truck. Lighter plug brings power in, antenna takes signal out.

Some "HELP" radios do much the same thing. I got a HELP radio on Freecycle that was broken. But, the power and antenna cords fit my GE 40 channel walkie rather nicely.

From: Lyle Mains
Topic: 749 Message: 751

Al, the Cobra 2010 is a pretty fair rig, especially for sideband. Some tend to have a problem of sideband freq drift though. The audio quality is fairly good, and the only thing I dislike about them is that the display isn't as good as I would like it to be. Depending on your mode of operation, for sideband, I would get a good quality frequency counter, at least a 6 digit display. It can be made to drive any lowdrive amplifier. As for the price you quoted, that is a very good deal!

Stop telling God how big your storm is and start telling your storm how big your God is!

Extra channels isn't much to go on. How many channels are you looking for? Are you looking for a base or a mobile? Is AM only okay or does it need to be SSB? Did you have a specific radio in mind?

Last question, with the CB band as quiet as it has been ,why is everybody in your area on the extra channels???

Jim

754. CB Radio Shops(Wildcat CB Shop)

Yahoo group: wakefield_cb_radio_UK
Date: 2009-12-01 10:38:58 UTC
From: Big Al
Topic: 754 Message: 754

I have no idea how many people in the groups that is a member of CB Radio Tricks. But some people is asking about CB shops. I live in Indiana and the CB shop i am talking about is over 200 miles from me in Michigan. Some may already know about him and maybe has used his shop. But stop and think, how many times have you called a CB shop to ask them something that is wrong with your radio. What do they say? Bring it in and we will bench test it. So you take it in and they look at it and say will its going to cost this to fix it. And if you say no i can not afford it at this time, than most likely they will say that it will be any were from 10-30 dollars just to bench test it. And they have you because if you don't pay for it they will keep your radio. They know what they are doing. I have not had Wildcat CB Shop do any work for me as of yet, because he has helped me over the computer on some stuff. He could easily say ship it to me and let me bench test it
and see what is wrong with it and than charge you for the bench test and shipping to get your radio back. But he does not do that, he will try to help you over the phone or the computer, and not charge you one penny. You have to know he cares about people and radios to do something like this. So if you have a problem with your radio, Please send him a email at wildcat2488@.... I know if it comes down to it and i need my radio worked on, he would be the person i would send it to.

From: Big Al
Topic: 762 Message: 762

I have a new portable jump start. 300 amps with 600 amp peak. Could i use this to power my Palomar? Or would it hurt it. I have a home made power supply that is from a computer power supply. I have tried it with the Palomar, and it did not kick the power supply off. Does thin mean it is working right sense it did not kick the power supply off? Or am i getting the full power out of the Palomar with it?

I will be making a conscious effort to wish everyone
a Merry Christmas this year ...
My way of saying that I am celebrating
the birth Of Jesus Christ.
So I am asking my email buddies,
if you agree with me,
to please do the same.
And if you'll pass this on to
your email buddies, and so on...
maybe we can prevent one more
American tradition from being lost in the sea of
"Political Correctness".

To one and All...
Jesus is the reason for the season!

I am selling my Motorola CM-510 CB radio. It has been completely redone. Has new mic card ridge in it, has been peaked and turned, and has been repainted. It has been sanded down to the metal and primed and repainted to a light Grey. There is nothing wrong with this radio. Works as good to day as it did when it was new. The Motorola CM-540 and the CM-510 was the last CB radios made by Motorola. If interested i will take offers on it. Thank you and have a nice Christmas.

-

Bayer Aspirin

I had heard the information about aspirin. Had no idea about the new Bayer. Sounds smart to have on hand.

Something new from Bayer!!

Something that we can do to help ourselves. Nice to know.

Bayer is making crystal aspirin to dissolve under the tongue. They work much faster than the tablets

Why keep aspirin by your bedside?
About Heart Attacks

There are other symptoms of an heart attack besides the pain on the left arm. One must also be aware of an intense pain on the chin, as well as nausea and lots of sweating, however these symptoms may also occur less frequently.

Note: There may be no pain in the chest during a heart attack. The majority of people (about 60%) who had a heart attack during their sleep, did not wake up.. However, if it occurs, the chest pain may wake you up from your deep sleep.

If that happens, immediately dissolve two aspirins in your mouth and swallow them with a bit of water.
Afterwards:
- phone a neighbor or a family member who lives very close by
- say "heart attack!"
- say that you have taken 2 aspirins.
- take a seat on a chair or sofa near the front door, and wait for their arrival and....
~ DO NOT LIE DOWN ~

Like most they most likely sell through a network of dealers and don't sell directly under that name remember none of the connex radios are legal.
Look on the back of the radio for a FCC ID number if the radio dosn't have one or says " 10 METER RADIO "it is not legal ..... and they are CYAing so the dealer takes the hit ....

From: Big Al
Topic: 406 Message: 780

Someone asked me what is the difference from a 1/2 wave base antenna and a 5/8 wave. I was not sure how to explain it. Can someone tell me the difference? I always understood that 5/8 wave would give you a longer distance than a 1/2 wave, and than someone told me it wouldn't. Can anyone clear this up?

Al
1/2 , 5/8 wave is the wavelength of the antenna in relation to the wavelength of the freq being used the antenna is a fraction of the wavelength of the freq being used for example CB is 11 Meters then the antenna will measure 5.5 meters for a 1/2 and so on.

#yiv1682929598 #yiv1937560836 DIV {
MARGIN:0px;}

We all try to convince people to participate in the democratic process, help candidates, give money, etc. Most are too busy, too unwilling or too timid. They have never been asked to serve their country as was Bud Day.

Medal of Honor recipient Bud Day

I got shot down over N Vietnam in 1967, a Sqdn. Commander.
After I returned in 1973...I published 2 books that dealt a lot
with "real torture" in Hanoi . Our make- believe president is
branding our country as a bunch of torturers when he has
no idea what torture is.

As for me, I put thru a mock execution because I would not respond...
pistol whipped on the head...same event.. Couple of days later...
hung by my feet all day. I escaped and a couple of weeks later, I got
shot and recaptured. Shot was OK...what happened afterwards was not.

They marched me to Vinh...put me in the rope trick, trick...almost
pulled my arms out of the sockets. Beat me on the head with a
little wooden rod until my eyes were swelled shut, and my unshot,
unbroken hand a pulp.

Next day hung me by the arms...rebroke my right wrist...wiped
out the nerves in my arms that control the hands...rolled my fingers
up into a ball. Only left the slightest movement of my L forefinger.
So I started answering with some incredible lies.

Sent me to Hanoi strapped to a barrel of gas in the back of a truck.

Hanoi..on my knees....rope trick again. Beaten by a big fool.

Into leg irons on a bed in Heartbreak Hotel.

Much kneeling--hands up at Zoo.

Really bad beating for refusing to condemn Lyndon Johnson.

Several more kneeling events. I could see my knee bone thru
kneeling holes.

There was an escape from the annex to the Zoo. I was the Senior
Officer of a large building because of escape...they started a mass
torture of all commanders.

I think it was July 7, 1969...they started beating me with a car fanbelt.
In first 2 days I took over 300 strokes...then stopped counting
because I never thought I would live thru it.

They continued day-night torture to get me to confess to a non-existent
part in the escape. This went on for at least 3 days. On my knees...
fan belting...cut open my scrotum with fan belt stroke. opened up
both knee holes again. My fanny looked like hamburger...I could not
lie on my back.

They tortured me into admitting that I was in on the escape...and
that my 2 room-mates knew about it.

The next day I denied the lie.

They commenced torturing me again with 3- 6- or 9 strokes of
the fan belt every day from about July 11 or 12th..to 14 October
1969. I continued to refuse to lie about my roommates again.

Now, the point of this is that our make-believe
president has declared to the world that we (U.S..) are a bunch of
torturers...Thus it will be OK to torture us next time when they
catch us...because that is what the U.S. does.

Our make-believe president is a know nothing fool who thinks
that pouring a little water on some one's face, or hanging a pair of
women's pants over an Arabs head is TORTURE. He is a meathead.

I just talked to MOH holder Leo Thorsness, who was also in my squadron,
 in jail...as was John McCain...and we agree that McCain does
not speak for the POW group when he claims that Al Gharib was
torture...or that "water boarding" is torture.

Our president and those fools around him who keep bad mouthing
our great country are a disgrace to the United States .. Please pass
this info on to Sean Hannity. He is free to use it to point out the
stupidity of the claims that water boarding...which has no after
effect...is torture.
If it got the Arab to cough up the story about how he planned the attack on the twin towers
in NYC ...
hurrah for the guy who poured the water.

"Bud" Day, Medal Of Honor Recipient

George Everett "Bud" Day(born February 24, 1925) is a retired
U.S. Air Force Colonel and Command Pilot who served during the
Vietnam War. He is often cited as being the most decorated U.S.
service member since General Douglas MacArthur, having
received some seventy decorations, a majority for actions
in combat. Day is a recipient of the Medal of Honor.

"Re-double you efforts to get everyday Americans to serve their country
and participate in Democracy."

785. Brand New Dosy FC-50P Freq. Counter

Yahoo group: wakefield_cb_radio_UK

From: Big Al
Topic: 785 Message: 785
Attachments: 1 described; binary payloads are missing from this source WARC

I got this brand new from Redman CB Stop. I bought a radio off of ebay that looked like it was almost new, so i jumped the gun and got this freq. counter to use with the radio. It was to have extra channels in it and that's why i got it. Will the radio was JUNK. Looked like it had been ran over by a truck and than a tank. I got my money back from it, but i still have this freq. counter. I would take 50.00 for it. I paid 69.95 for it, so my lost is your gain. Like i said it is brand new. I just went ahead and order me a new radio from Redman CB Stop so i wouldn't have to take a chance on JUNK. If anyone out there has never done business with Redman CB, please do so. He did me right on this radio and i just think the world of it. I can not reach out and touch someone. If you go to www.redmancb.com you will see the freq. counter.

From: Big Al
Topic: 786 Message: 786

I have to put a plug in for the Redman CB Stop CB store. I bought a 2950DX and a Astatic AST-878DM desk mic from him and i am very pleased with his service. I found a Connex 3300 on ebay and from the picture it looked like a nice one. Will when it came it looked like it had been put though the saw mill. Turn it on and yes it came on, but had no sound at all and it would barely key up, Boy was i ever mad. I open it up and speaker wires was all cut, missing screws. Make a long story short i sent it back and i finally got my money back. So i decided to just buy a new one with money i got out of my old radios. Tom at Redmans told me the Astatic would sound the best with the 2950DX. He was 100% right. People i have talked to on it says it is the best sounding radio with that mic that they had ever heard. So if you want someone to do you right by, i would go with Redman CB shop. www.redmancb.com He will do you right. I am glad i did. One more thing, The
RCI-2950DX is a GREAT RADIO, if you get one you will not be disapointed

Just a few things that i would like to share with the group. The first thing is if anyone knows anything about a Palomar 250HD delay.I like my Palomar very well, but i don't like the way it has a 1-3 second delay on it when i am talking on the AM side of the radio. Does anyone know how to correct this problem?
The other things i would like to share is good old ebay. Were i live if you don't have a radio with extra channels in it, than you are not going to talk to much on my radio. Just about ever one around here goes down to the basement and talks. So i decided to sell my antique radios and get me one that has the channels i needed to go to the basement and talk. So i went on ebay to see what they had. The first radio i got was a emperor TS-5010. It was a nice radio and had all the channels that i needed. But it had a problem, i could not squelch out all the back ground noise. It was very upsetting to have to listen to all that noise all the time. The second radio i got was a connex 3300. The picture on ebay looked like it was a nice radio. When i got it the thing looked like it was ran though the saw mill and than ran over by a truck and a tank. The speaker wires was all cut and it would barley key up. After waiting on paypal to refund my money i just decided
to get all new stuff. I got a new RCI 2950DX and a new Astatic desk mic and a new Dosy 4001P meter. I was a little afraid about it because i didn't want another radio that i could not squelch out the noise. I got it from Redman CB shop. I fell in love with this radio. Works perfect in every way. I was going to go with a superstar silver D-104, but he told me the new Astatic AST-878DM would be better because it was a better mic. I have talked all across the states with it and talked to locals with it and everyone i talked to says that it is the best sounding radio with that mic that they have heard in a long time. If you are thinking about a new radio and a mic or just the mic, i highly recommend the RCI-2950DX and the Astatic mic. I have not yet hooked my Kicker K 500 to it yet, But i would say it will kick butt when i do get everything set up. The Kicker K 500 dead keys 500 watts and will swing to almost 1000 watts. Please fell free to email me at
anytime if i can be more help to you if you are thinking about new radio stuff. I have posted pictures of my new items. Thanks and have a great day.

I would remind you that when one use the so called extra channels on a CB they are in fact in violation of FCC rules and regulations in a few ways they are first in violation in that they are most likely using a radio that has been modified so that it is no-longer type excepted. Second they are transmitting out of band. Third most probidley causing interference to some one. Now will the FCC come and raid your house not likely they just don't have the man power. Not unless some one complains but should that happen they don't have much of a sense of humor when they knock on your door. Big fines and they take all your radio equipment, the fines can be thousands of dollars. You know hams have a neat thing they call QRP that's when they use five watts or less on almost any band to make QSO's (contacts) and it happens more then one would think.

The picture on ebay looked like it was a nice radio. When i got it the thing looked like it was ran though the saw mill and than ran over by a truck and a tank. The speaker wires was all cut and it

would barley key up. After waiting on paypal to refund my money i just decided to get all new stuff. I got a new RCI 2950DX and a new Astatic desk mic and a new Dosy 4001P meter. I was a little afraid about it because i didn't want another radio that i could not squelch out the noise. I got it from Redman CB shop. I fell in love with this radio. Works perfect in every way. I was going to go with a superstar silver D-104, but he told me the new Astatic AST-878DM would be better because it was a better mic. I have talked all across the states with it and talked to locals with it and everyone i talked to says that it is the best sounding radio with that mic that they have heard in a long time. If you are thinking about a new radio and a mic or just the mic, i highly recommend the RCI-2950DX and the Astatic mic. I have not yet hooked my Kicker K 500 to it yet, But i would say it will kick butt when i do get everything set up. The Kicker K 500 dead keys 500 watts and will swing to almost 1000 watts. Please fell free to email me at anytime if i can be more help to you if you are thinking about new radio stuff. I have posted pictures of my new items. Thanks and have a great day.

WHY?

By using a radio you agree to obay the rules

Big Al
I would remind you that when one use the so called extra channels on a CB they are in fact in violation of FCC rules and regulations in a few ways they are first in violation in that they are most likely using a radio that has been modified so that it is no-longer type excepted. Second they are transmitting out of band. Third most probidley causing interference to some one. Now will the FCC come and raid your house not likely they just don’t have the man power. Not unless some one complains but should that happen they don’t have much of a sense of humor when they knock on your door. Big fines and they take all your radio equipment, the fines can be thousands of dollars. You know hams have a neat thing they call QRP that’s when they use five watts or less on almost any band to make QSO’s (contacts) and it happens more then one would think.
Stay dry and warm

Just a few things that i would like to share with the group. The first thing is if anyone knows anything about a Palomar 250HD delay.I like my Palomar very well, but i don't like the way it has a 1-3 second delay on it when i am talking on the AM side of the radio. Does anyone know how to correct this problem?

The other things i would like to share is good old ebay. Were i live if you don't have a radio with extra channels in it, than you are not going to talk to much on my radio. Just about ever one around here goes down to the basement and talks. So i decided to sell my antique radios and get me one that has the channels i needed to go to the basement and talk. So i went on ebay to see what they had. The first radio i got was a emperor TS-5010. It was a nice radio and had all the channels that i needed. But it had a problem, i could not squelch out all the back ground noise. It was very upsetting to have to listen to all that noise all the time. The second radio i got was a connex 3300. The picture on ebay looked like it was a nice radio. When i got it the thing looked like it was ran though the saw mill and than ran over by a truck and a tank. The speaker wires was all cut and it would barley key up. After waiting on paypal to refund my money i just decided to get all new stuff. I got a new RCI 2950DX and a new Astatic desk mic and a new Dosy 4001P meter. I was a little afraid about it because i didn't want another radio that i could not squelch out the noise. The simple fact is if you don't want to follow FCC rules THEY have the rights and that includes the right to take your radios amps and anything else that requires a license.

Yes i used to have a cb radio when i was a teen back on the 70's when cb's were really popular it was a Midland mobile on a power pack, with an outside antenna and now I own my own 40 channel hand held Midland cb radio Micro Mobile Portable CB.

I am searching for friends who own CB radios and want to chat!

hello all,
I have a number of cb handhelds to clear, as follows:
8x havard 410, 40 channel uk band. asking £30 each or reasonable offer.
1x midland 3 channel, not sure what ones though. asking £25 or reasonable offer.
1x GE 3 channel am, probably mid band, not sure which 3 channels it has. asking £20 or reasonable offer.
1x panasonic single channel, not sure if fm or am, or what band. asking £20 or reasonable offer.
4x dnt, 40 channel fm, think at least one of them is mid band, don't know which ones are which, so is going to be pot luck which band you get. asking £30 each or reasonable offer.
and 3x radioshack trc230 40 channel, not sure what band, I think mids. asking £30 each or reasonable offer.
anyone wanting to take the lot off of my hands will get a very special price.

payments by paypal, bank transfer, or cash on collection please, if using paypal, please add 4% to cover paypal charges.

if interested in any items, please either call, on 07957880038, or e-mail: goshawk_on_horseback@...
